Please refer to the Theory Syllabus for details on all sections of the exam.
Check trinitycollege.com/theory to make sure you are using the current version.

Introduction

Using this workbook

The writing in the boxes  tells you:

- About the music that you sing, or play on your instrument
- What you need to know to pass your Trinity College London Grade 4 Theory of Music exam. Topics from previous grades of the syllabus should also be known

Doing the tasks

- Use a pencil with a sharp point and a fairly soft lead so that you can easily rub out what you have written if you need to
- Be careful to be accurate with musical notes and signs – this will make a difference to your marks because the examiner must be able to read what you have written
- Read through the boxes to make sure you understand how to do the tasks and ask for help if you need it
- The first task in each section has usually been done for you **in orange** to show you what to do
- Use the picture of the piano keyboard on page 69. It is there to help you, even if you do not play a keyboard instrument
- **Always try to play, sing or tap the music you write.** This is a very important part of learning, and will help you 'hear' what you write in your head. It will help you in the exam when you have to work in silence

What comes next?

When you have finished this book try some sample papers. You can purchase them from www.trinitycollege.com/shop. You will then be ready to ask your teacher to enter you for the Grade 4 Theory of Music exam.

Alto clef

Handy tip!

When you write the alto clef, position the middle of the clef carefully; this is important because there are other C clefs centred on different lines.

Did you know?

Open strings are the notes that sound when you play a string instrument without putting your fingers down to change the pitch.

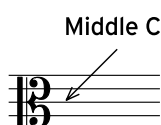

Did you know?

Composers often change clefs in a piece — sometimes in the middle of a bar.

Treble and bass clefs are not the only clefs that composers use when they write music. The new clef for Grade 4 is the **alto clef**.

Remember that the treble clef is sometimes known as the G clef because the little curved line in the middle of the clef curls around the line where the note **G** sits. The bass clef is sometimes known as the F clef because its little dots go on either side of the line where the note **F** sits.

The alto clef is known as a **C clef** because its middle centres on **Middle C**:

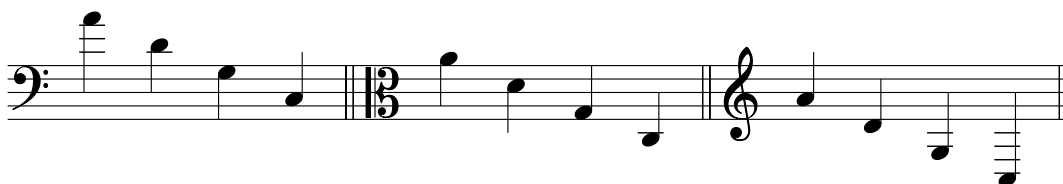

Here is **Middle C** written in bass, alto and treble clefs:

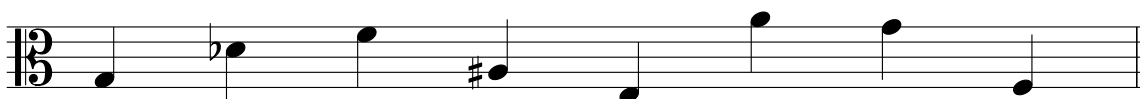

The alto clef is used for instruments whose music tends to be written at the bottom of the treble clef stave and the top of the bass clef; using the alto clef means that there is no need for the composer to write lots of leger lines.

Music for viola is usually written in alto clef. Here are its open strings written in bass, alto and treble clefs to show why it makes sense to use the alto clef for its music.

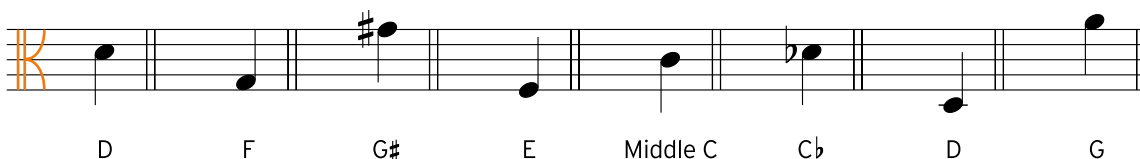

1 Name these notes:

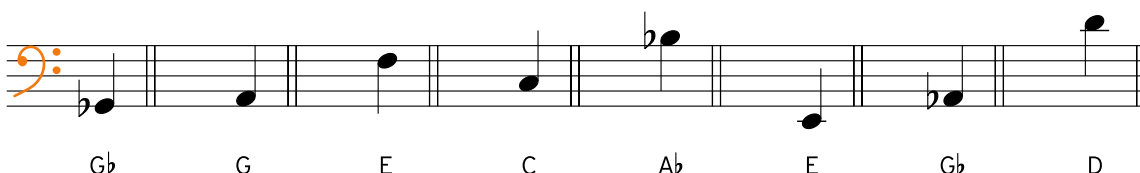

G

2 Write either a treble or alto clef before these notes to make the note name correct.

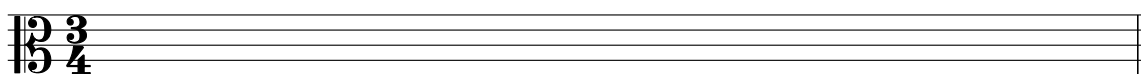

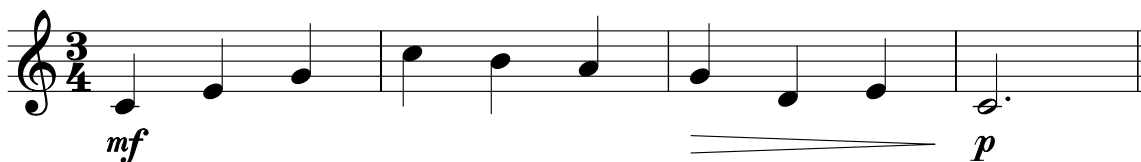

3 Write either a bass or alto clef before these notes to make the note name correct.

Handy tip!

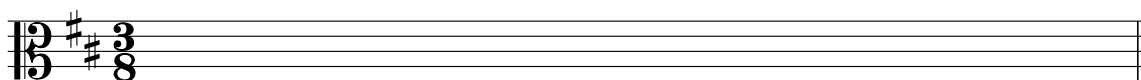

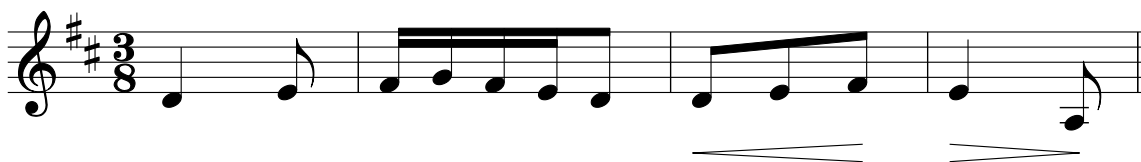

Use Middle C to help you check your first and last note.

4 Write the following tunes using alto clef, so that they sound at the same pitch.

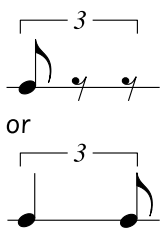

Handy tip!

Notice the position of the sharps or flats in the key signatures in alto clef.

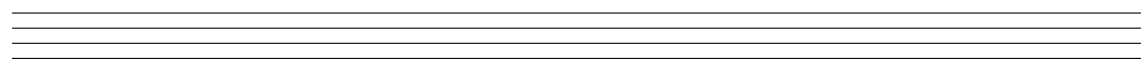

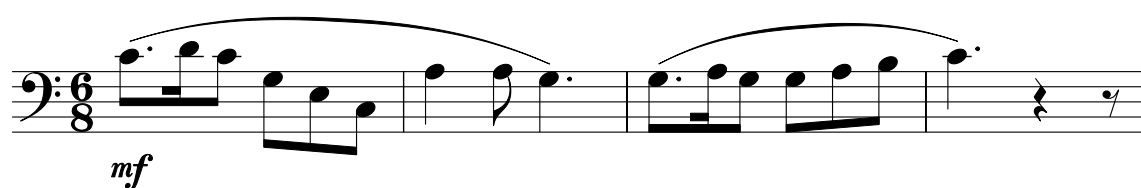

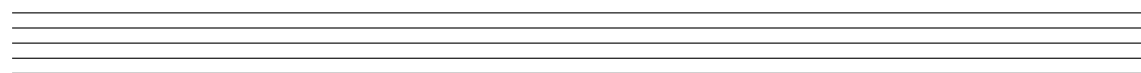

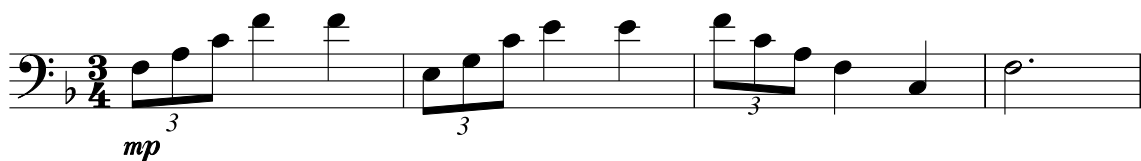

Remember

You do not need to use a bracket when there are three triplet quavers, but you must bracket any other triplet grouping, e.g.

5 Write the following tunes using alto clef, so that they sound at the same pitch.

New time signatures

Did you know?

Since the 1900s these time signatures have become more and more common.

Did you know?

In some pieces the way the main beats are grouped changes nearly every bar.

Remember

A semibreve rest is used to show a whole bar of silence in any time signature.

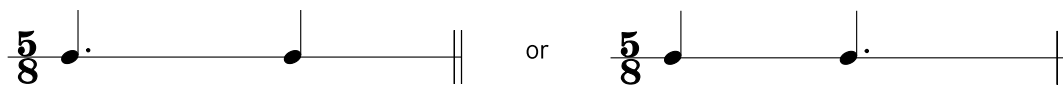

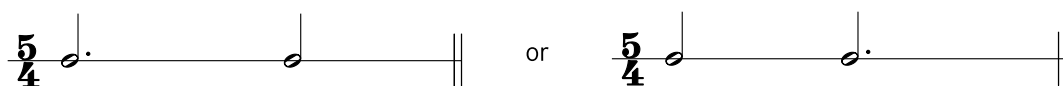

For Grade 4 you need to know the following new time signatures:

$\frac{5}{4}$ (5 crotchet beats in each bar)

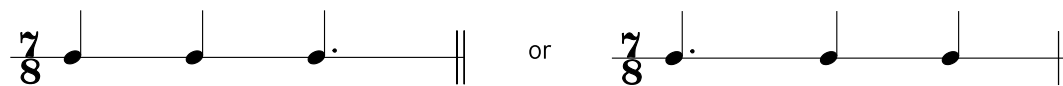

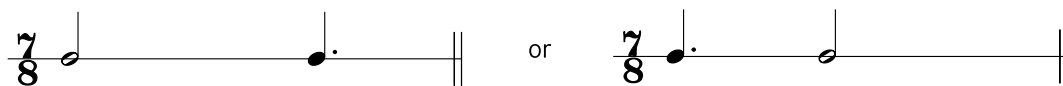

$\frac{5}{8}$ (5 quaver beats in each bar)

$\frac{7}{8}$ (7 quaver beats in each bar)

When writing in $\frac{5}{4}$ or $\frac{5}{8}$ composers tend to group the crotchet or quaver beats into two longer main beats. These main beats are irregular in length, for example:

When writing in $\frac{7}{8}$ composers tend to group the quaver beats into two or three longer main beats. These main beats are irregular in length, for example:

Numbers are sometimes written above the music to show how notes and rests are to be grouped and beamed:

1 Write the main beats in each of the following bars:

(3, 2)	(2, 3)
(4, 3)	(2, 3)
(3, 2)	(2, 2, 3)

2 Write the correct time signatures.

3 Add time signatures to the music.

Yandell

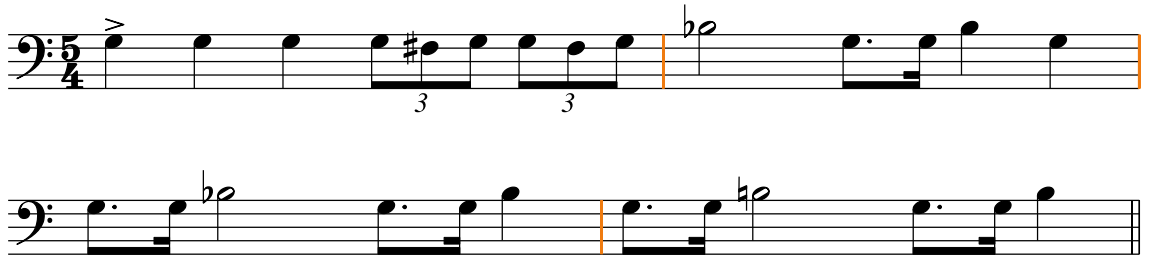

Yandell

Yandell

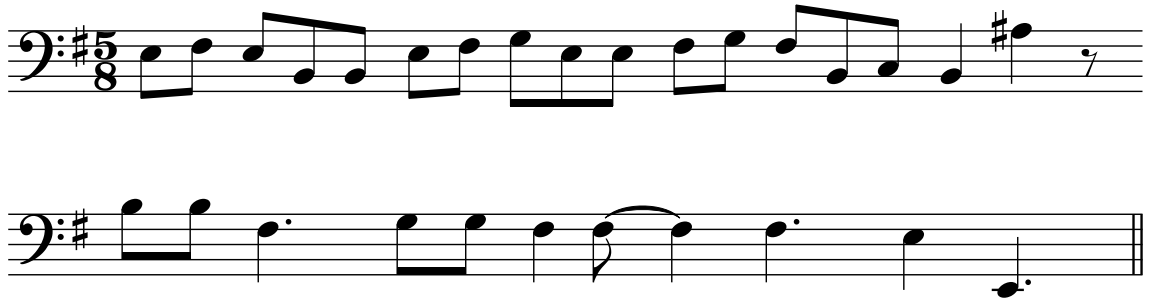

Yandell

4 Look at the following music. Add bar lines to agree with the time signatures.

Writing your own tunes to a given rhythm

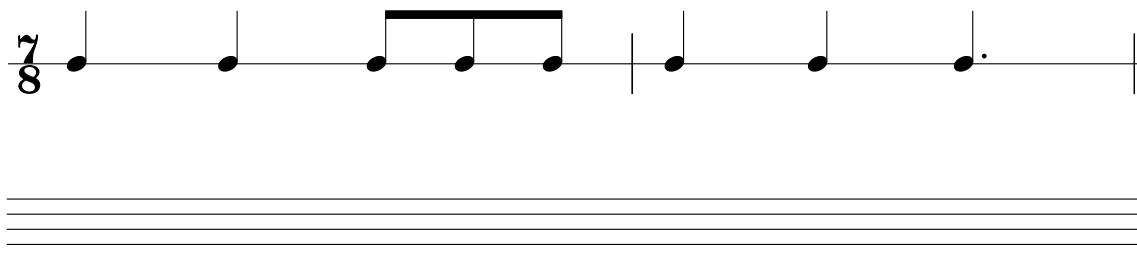

Handy tip!

See page 68 for the ranges of violin, viola and cello (string instruments) and flute, oboe and bassoon (woodwind instruments).

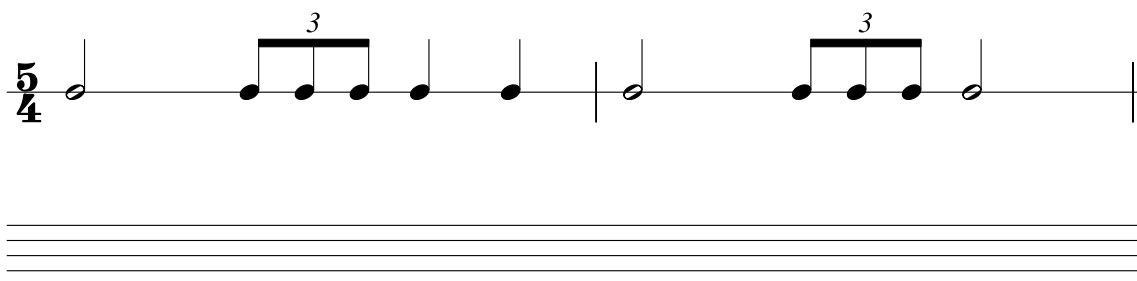

- 1 Write a tune for viola using the first five degrees of the scale of G minor to the given rhythm. Use a key signature and finish on the tonic.

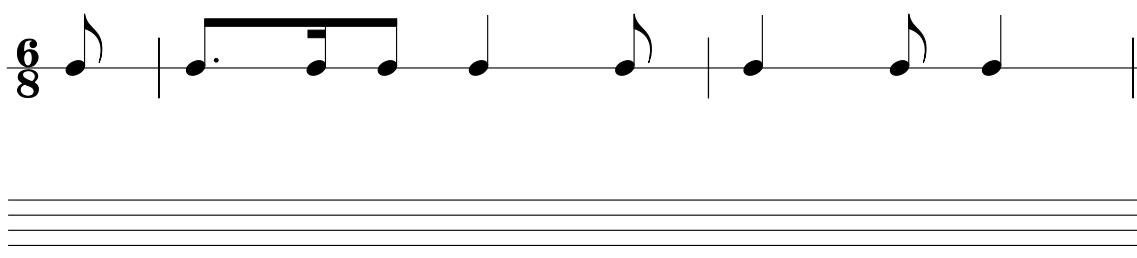

- 2 Write a tune for oboe using the notes of the tonic triad in B minor to the given rhythm. Use a key signature and finish on the tonic.

- 3 Write a tune for viola using the first five degrees of the scale of D major to the given rhythm. Use a key signature and finish on the tonic.

- 4 Write a tune for bassoon using the notes of the tonic triad in B flat major to the given rhythm. Use a key signature and finish on the tonic.

- 5 Look at the tunes you have written and add some musical words and symbols that you know. Also see page 55 for those for Grade 4.

Harmonic rhythm

Remember

Chord progression means the order in which chords move from one to another in a piece of music.

Handy tip!

The chords in these examples have been written as triads in root position to make the chord progression easy to see. Composers hardly ever use lots of root-position triads because chords spaced so closely in the bass make the music sound heavy. Composers also usually want to avoid parallel 5ths (see page 33).

Harmonic rhythm describes the way a chord progression moves below the tune in a piece of music – whether the chords change quickly or slowly, regularly or irregularly. The type of harmonic rhythm that a composer uses can really affect the mood of a piece.

Here are some examples:

Sur le pont d'Avignon (first phrase)

Here the harmonic rhythm is **regular** – it changes once a bar:

Chord progression: G (I), D (V), G (I), D (V)

Steal away to Jesus (first phrase)

Here the harmonic rhythm is **static** for three bars (the chord stays the same for 3 bars even though the composer builds up the tension by raising the pitch of the notes in the tune):

Chord progression: D (I), D (I), D (I), A (V), D (I)

Au clair de la lune (first phrase)

Here the harmonic rhythm is **irregular** to start with:

Chord progression: C (I), G (V), C (I), G (V), C (I), G (V), C (I)

1 Describe the harmonic rhythm in the following music.

C G C G Anon

I V I V

This musical score is in 3/4 time. The treble clef staff contains a melody of quarter notes: C4, D4, E4, F4, G4, A4, B4, C5. The bass clef staff contains a harmonic rhythm of whole notes: C3, G2, C3, G2. The notes are labeled with Roman numerals I and V below the staff.

D A D D A D Traditional (Ukrainian)

I V I I V I

This musical score is in 2/4 time. The treble clef staff contains a melody of eighth notes: D4, E4, F#4, G#4, A4, B4, C5, D5. The bass clef staff contains a harmonic rhythm of whole notes: D3, A2, D3, A2, D3, A2. The notes are labeled with Roman numerals I and V below the staff.

F F F F F Traditional (American)

I I I I I

This musical score is in 3/4 time. The treble clef staff contains a melody of quarter notes: F4, G4, A4, B4, C5, D5, E5, F6. The bass clef staff contains a harmonic rhythm of whole notes: F3, C3, F3, C3, F3, C3, F3, C3. The notes are labeled with Roman numerals I below the staff.

D G D G G D Traditional (English)

V I V I I V

This musical score is in 6/8 time. The treble clef staff contains a melody of eighth notes: D4, E4, F#4, G#4, A4, B4, C5, D5. The bass clef staff contains a harmonic rhythm of whole notes: D3, A2, D3, A2, D3, A2. The notes are labeled with Roman numerals V and I below the staff.

2 How does the rhythm of these tunes differ from the harmonic rhythm?

Traditional (Russian)

i V i V

The rhythm of the tune moves faster than the harmonic rhythm which is regular

Schubert

I V I V I V I V

I I I I I

Traditional (Russian)

I I V V I

Setting words to a rhythm

Did you know?

A syllable is part of a word (for example, the word music is made up of two syllables mu-sic). Hyphens are used to show which syllable to sing on which note.

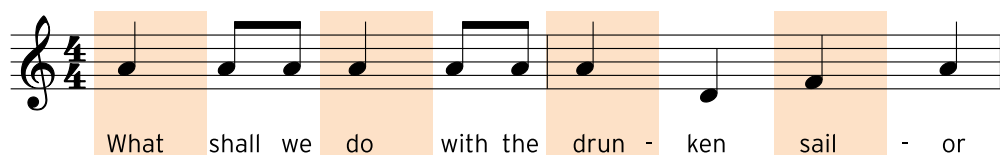

Handy tip!

An anacrusis (up-beat) is used if the first word or syllable is not as important as the second, for example: A ship there is etc. Remember to take this into account in the last bar.

People have been setting words to a rhythm or to a tune throughout history. Usually the most important words or syllables land on strong beats in the bar. This is what you need to do for your exam. Tap and sing this music so that you can feel the strong beats or stresses:

For example:

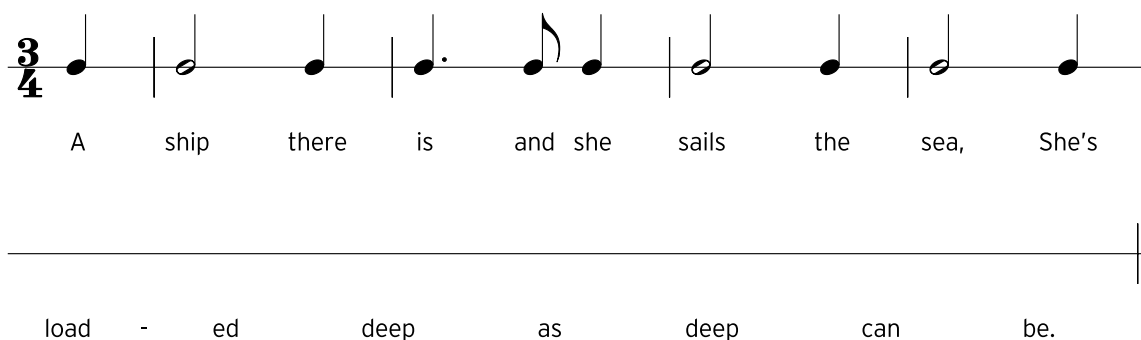

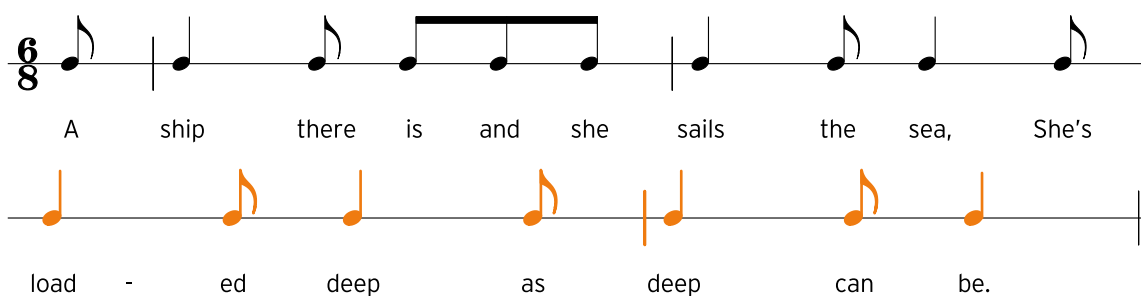

- 1 Underline the important words or syllables in these phrases.

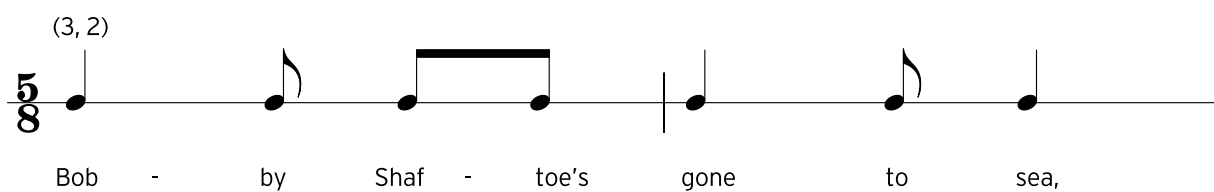

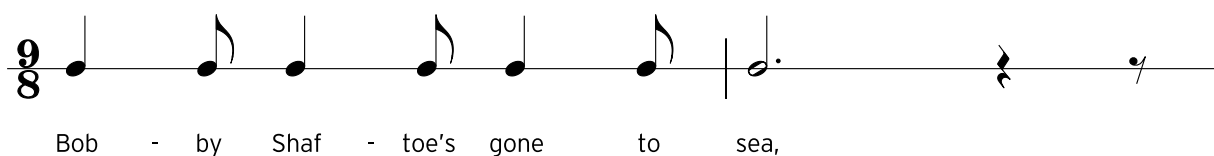

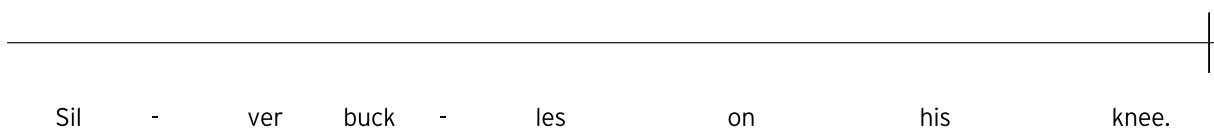

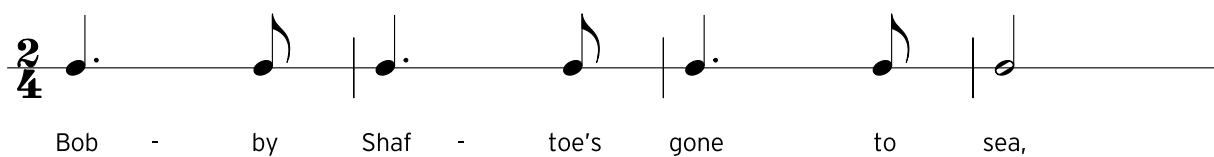

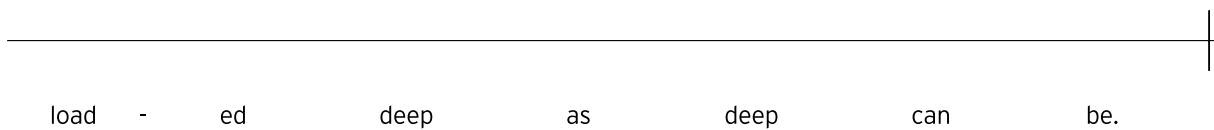

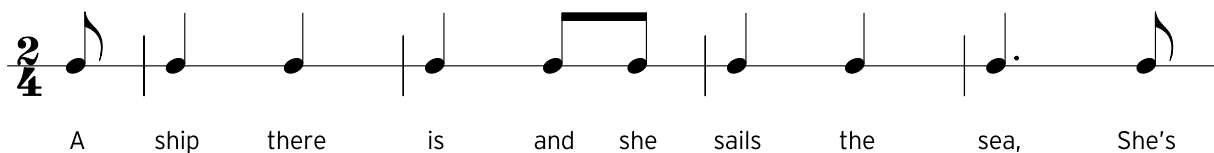

A ship there is and she sails the sea,
She's load - ed deep as deep can be.

Bob-by Shaf-toe's gone to sea,
Sil-ver buck-les on his knee.

A life on the hea-ving sea,
At home on the bound-ing wave!

- 2 Continue the rhythms to fit the following phrases. Each is set in more than one way because it is possible to set the same words to rhythms in different time signatures.

Composers often separate the beaming like this to make each syllable clear for the singer:

Bob - by Shaf - toe's gone to sea, _

Writing words under a rhythm

If a word has one syllable, centre the word below the correct note. If it has more than one syllable, put each syllable below a different note with a hyphen to link them.

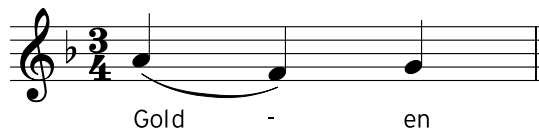

If a few notes are to be sung to one syllable, add a line at ground level to show where the sound of the syllable should end. For example:

The same applies if the note to be sung is tied:

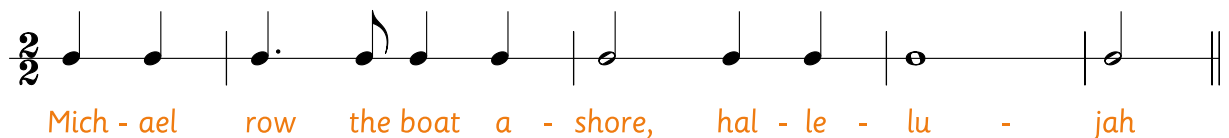

If more than one note is to be sung within a word with more than one syllable, add only a hyphen:

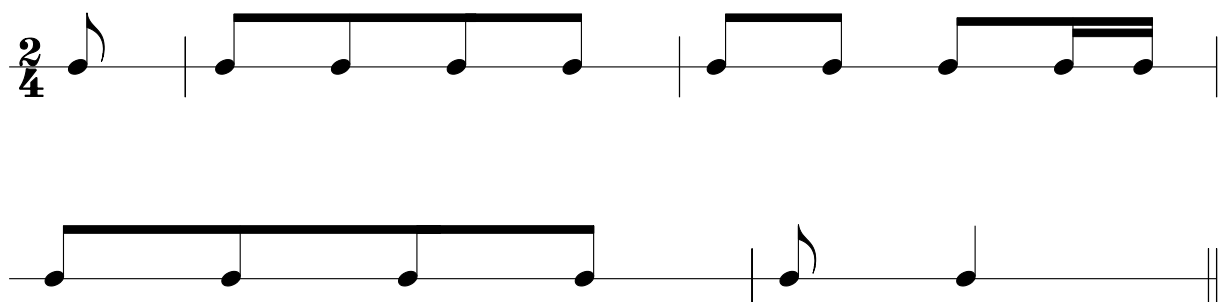

3 Write the given words below the rhythms.

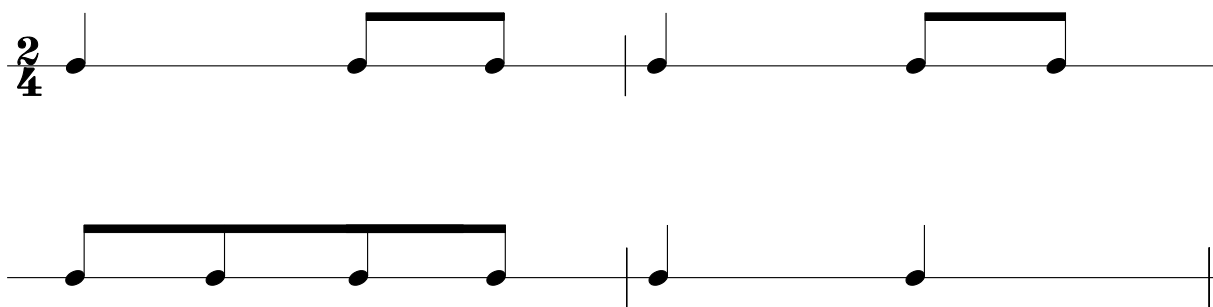

Michael row the boat ashore, hallelujah

One evening as the sun went down
And the jungle fires were burning

Early one morning just as the sun was rising

- 4 The following music contains mistakes in the setting of words. Write the words out correctly in the coloured boxes.

Traditional (English)

Three gypsies stood at the castle gate

Three____ gyp - sies stood at the cas - tle gate

Spiritual

That promised land where all is peace

Traditional (Chilean)

In the evening - as I wander - Through the

town by lantern light

Enharmonic equivalents

Look at these notes:

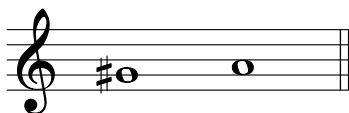

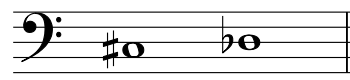

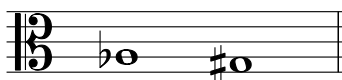

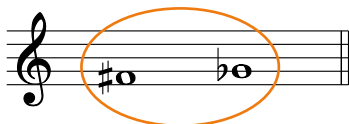

B flat

A sharp

If you play them one after the other on a piano keyboard you will hear that they sound the same even though they are written differently. Notes written like this are **enharmonically equivalent**.

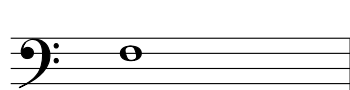

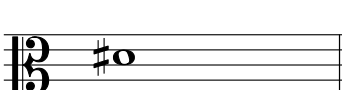

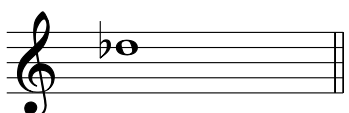

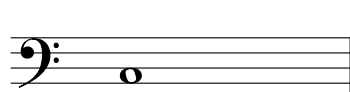

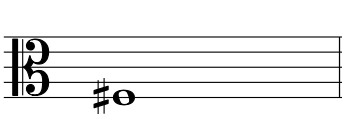

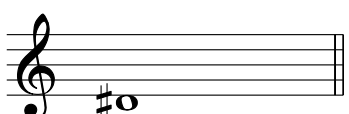

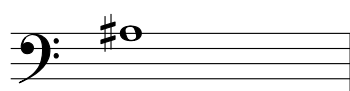

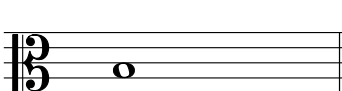

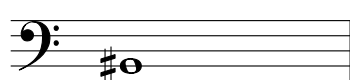

1 Circle the pairs of notes that are enharmonically equivalent.

Handy tip!

To start with, use the picture of the piano keyboard on page 69 to help you, and don't forget to look at the clef.

2 Write the enharmonic equivalents of the following notes.

The chromatic scale

Handy tip!

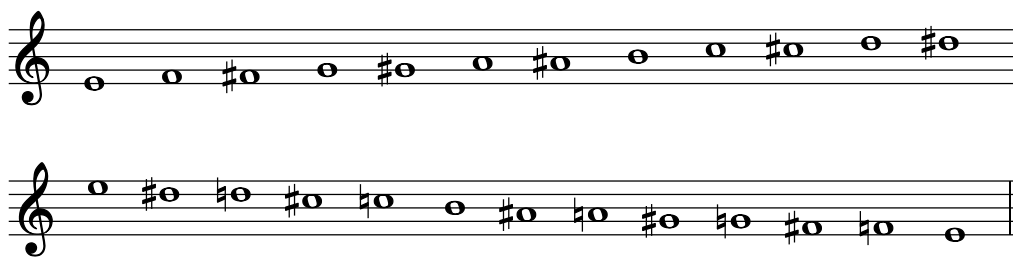

A **chromatic passage** is a part of a piece that moves up or down in intervals of a semitone (although it might have more than one note on each degree of the chromatic scale).

In a **chromatic scale** the distance between each degree of the scale and the next is a semitone.

The scale is easy to find on a piano keyboard. Just play every note in the octave (white and black) from **C-C** or **B flat-B flat** etc., and you will find it.

Just as there is more than one way to write and name notes enharmonically, there is more than one correct way to write a chromatic scale.

Here is one way of writing a one-octave **E** chromatic scale going up then down.

In reality composers tend to be inconsistent when they write chromatic passages. Often they are writing chromatic notes within a key signature so some accidentals are already taken care of anyway.

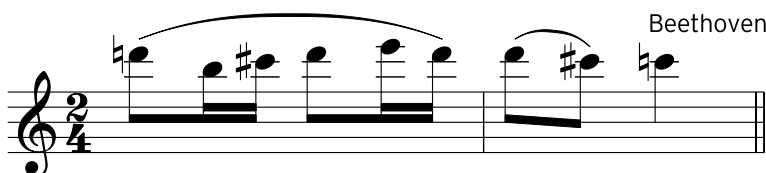

For Grade 4 you do not need to be able to write out a chromatic scale but you should be able to recognise one (whole or part) and to find chromatic passages in a piece of music.

1 Circle the chromatic passages.

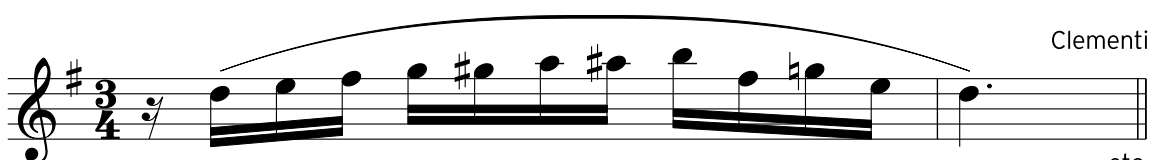

Schubert

Beethoven

Kuhlau

Clementi

etc.

Remember

Check the clef and key signature when you look for music moving in semitones.

2 Rewrite the following music without a key signature.

Chopin

etc.

Mahler

Beethoven

etc.

3 Copy this C chromatic scale in minims going up.

4 Copy this D chromatic scale in crotchets going down.

Remember

Music moves in similar motion if two or more parts move in parallel or in the same direction.

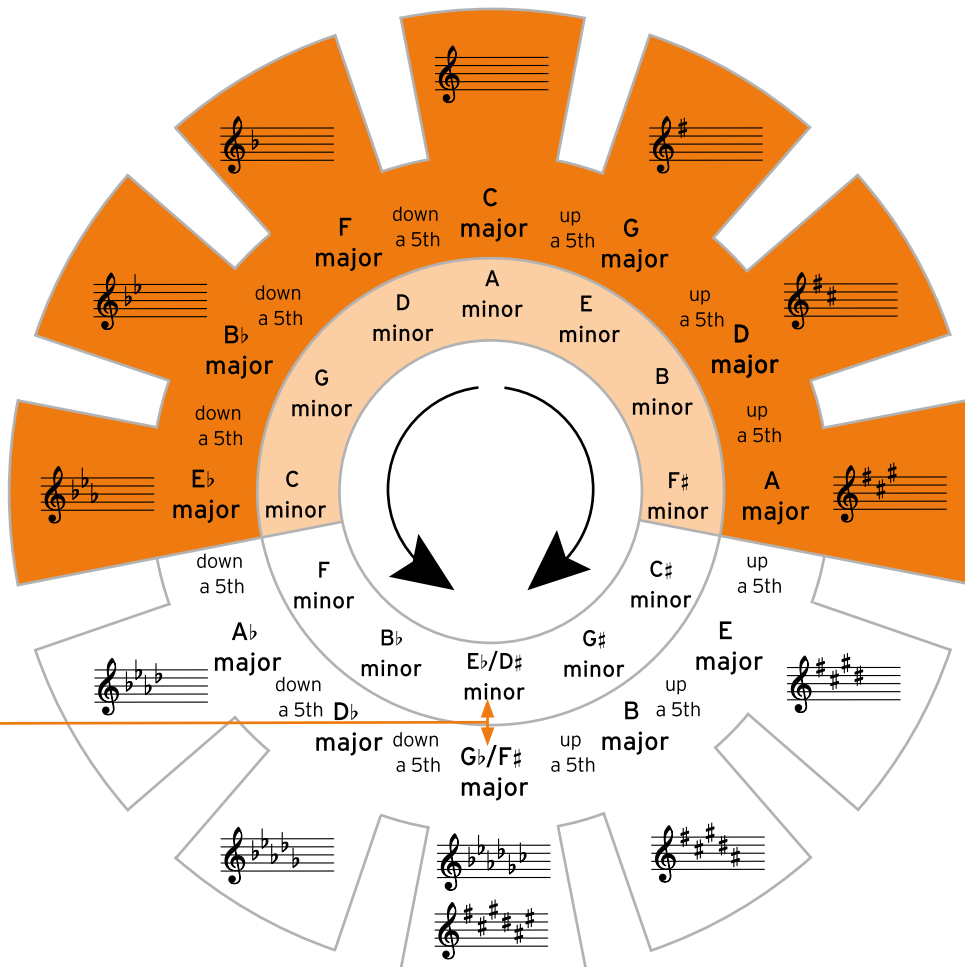

5 Write two more repeats of these chromatic ostinati that move in similar motion.

The first system consists of three staves. The top staff is in 3/4 time, showing a chromatic line with notes G4, A4, B4, C5, D5, E5, F5, G5, A5, B5, C6, D6, E6, F6, G6, A6, B6, C7, D7, E7, F7, G7, A7, B7, C8, D8, E8, F8, G8, A8, B8, C9, D9, E9, F9, G9, A9, B9, C10, D10, E10, F10, G10, A10, B10, C11, D11, E11, F11, G11, A11, B11, C12, D12, E12, F12, G12, A12, B12, C13, D13, E13, F13, G13, A13, B13, C14, D14, E14, F14, G14, A14, B14, C15, D15, E15, F15, G15, A15, B15, C16, D16, E16, F16, G16, A16, B16, C17, D17, E17, F17, G17, A17, B17, C18, D18, E18, F18, G18, A18, B18, C19, D19, E19, F19, G19, A19, B19, C20, D20, E20, F20, G20, A20, B20, C21, D21, E21, F21, G21, A21, B21, C22, D22, E22, F22, G22, A22, B22, C23, D23, E23, F23, G23, A23, B23, C24, D24, E24, F24, G24, A24, B24, C25, D25, E25, F25, G25, A25, B25, C26, D26, E26, F26, G26, A26, B26, C27, D27, E27, F27, G27, A27, B27, C28, D28, E28, F28, G28, A28, B28, C29, D29, E29, F29, G29, A29, B29, C30, D30, E30, F30, G30, A30, B30, C31, D31, E31, F31, G31, A31, B31, C32, D32, E32, F32, G32, A32, B32, C33, D33, E33, F33, G33, A33, B33, C34, D34, E34, F34, G34, A34, B34, C35, D35, E35, F35, G35, A35, B35, C36, D36, E36, F36, G36, A36, B36, C37, D37, E37, F37, G37, A37, B37, C38, D38, E38, F38, G38, A38, B38, C39, D39, E39, F39, G39, A39, B39, C40, D40, E40, F40, G40, A40, B40, C41, D41, E41, F41, G41, A41, B41, C42, D42, E42, F42, G42, A42, B42, C43, D43, E43, F43, G43, A43, B43, C44, D44, E44, F44, G44, A44, B44, C45, D45, E45, F45, G45, A45, B45, C46, D46, E46, F46, G46, A46, B46, C47, D47, E47, F47, G47, A47, B47, C48, D48, E48, F48, G48, A48, B48, C49, D49, E49, A364, B364, C365, D365, E365, F365, G365, A365, B365, C366, D366, E366, F366, G366, A366, B366, C367, D367, E367, F367, G367, A367, B367, C368, D368, E368, F368, G368, A368, B368, C369, D369, E369, F369, G369, A369, B369, C370, D370, E370, F370, G370, A370, B370, C371, D371, E371, F371, G371, A371, B371, C372, D372, E372, F

The circle of 5ths

Here is the circle of 5ths that you will recognise from Grades 1-3. The highlighted keys are the only ones that you will need for Grade 4.

Did you know?

There are whole keys that are enharmonically equivalent. You do not need to know this for your exam.

Using the circle of 5ths above, answer these questions:

- 1 Which minor key has three flats in its key signature? _____
- 2 Which major key has two sharps in its key signature? _____
- 3 Which minor key has three sharps in its key signature? _____
- 4 Which major key has three sharps in its key signature? _____
- 5 Which minor key has two flats in its key signature? _____
- 6 Which minor key has one sharp in its key signature? _____
- 7 Which major key has no flats or sharps in its key signature? _____

More about the new keys for Grade 4

The new keys for Grade 4 are **A major** and **E flat major** (and their relative minors **F sharp** and **C**). They work like the others you have learned; the key signatures are there to make sure that the tone-semitone pattern is the same for each key.

1 Write the key signature and the tonic triad in root position for each of the following keys.

A major

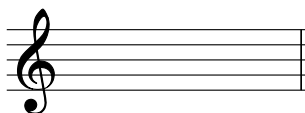

E $\flat$ major

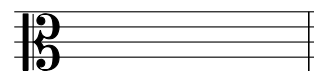

A major

F $\sharp$ minor

C minor

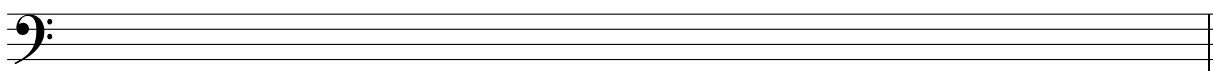

F $\sharp$ minor

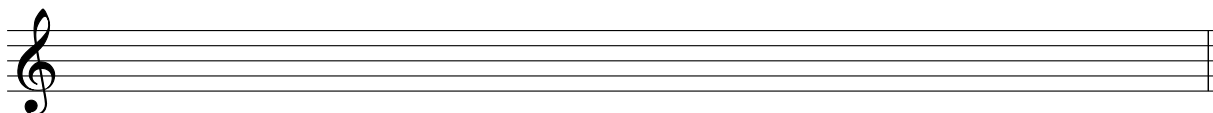

2 Write a one-octave E flat major scale in minims going up then down. Use a key signature.

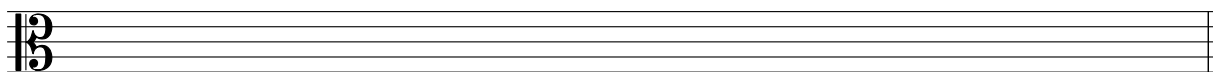

3 Write a one-octave A major scale in crotchets going down then up. Use a key signature.

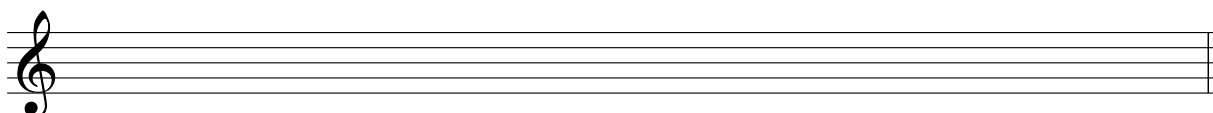

4 Write a one-octave E flat major scale in minims going down then up. Do not use a key signature but write in the necessary accidentals.

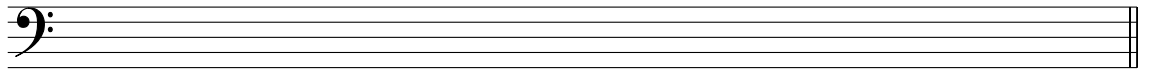

5 Write a one-octave A major scale in crotchets going up then down. Do not use a key signature but write in the necessary accidentals.

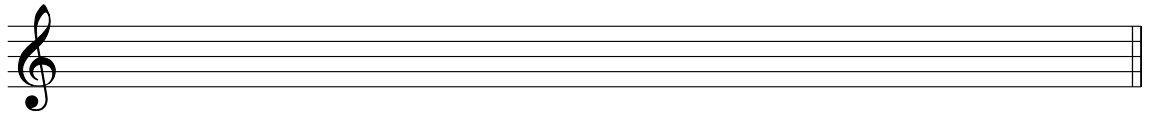

6 Write a one-octave C harmonic minor scale in minims going up then down. Use a key signature.

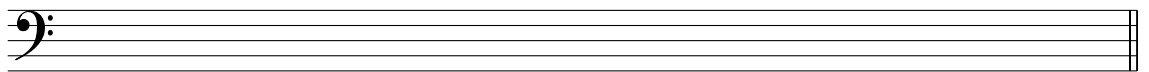

- 7 Write a one-octave F sharp melodic minor scale in crotchets going up then down. Use a key signature.

- 8 Write a one-octave F sharp natural minor scale in minims going down then up. Do not use a key signature but write in the necessary accidentals.

- 9 Write a one-octave C melodic minor scale in crotchets going up then down. Do not use a key signature but write in the necessary accidentals.

Labelling scales

- 1 Label these scales.

F# natural or melodic minor going down

Remember

Melodic and natural minor scales sound the same going down, so either label is correct.

2 Label these scales. Here there are no key signatures so check the accidentals instead.

Bb major going up

Labelling inversions of tonic triads

Root position, first and second inversions of tonic chords or triads can be labelled with Roman numerals.

In major keys a root position triad is labelled **I** (as you already know); a first inversion triad is labelled **I^b** and a second inversion triad is labelled **I^c**. In minor keys: **i**, **i^b** or **i^c**.

Here are the tonic triads of C major and A minor labelled this way:

C major

I I^b I^c

A minor

i i^b i^c

Chord symbols show that the triad is in first or second inversion by giving the bass-line note after the chord symbol, like this:

C C/E C/G

C major

Am Am/C Am/E

A minor

Did you know?

Figured bass (used in a lot of 18th-century music) is based on the intervals between the bass-line and the notes to be played above them. Here are the root, first and second inversion triads written in this way:

C major

5 6 6
3 3 4

Count up the interval numbers from the bottom note in the examples above and you should understand how it works. You do not need to know this for your exam, but if you play a piece by J S Bach (or another 18th-century composer) look out for the figured bass below the keyboard part.

- 1 Write the key signature and the tonic triad for each of the keys shown. Then write its first and second inversions. Label them using Roman numerals below the staff and chord symbols above.

Handy tip!

Notice that here there is a C sharp written in as the bass-line note. This is because there is a C sharp in the key signature.

A A/C# A/E

A major I Ib Ic

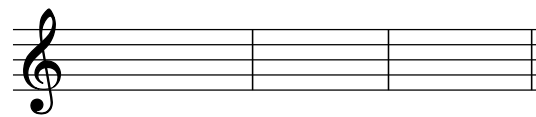

A major

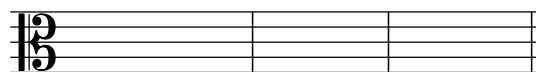

B minor

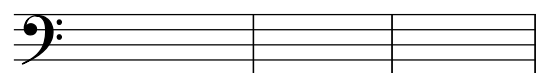

C minor

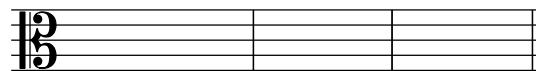

E♭ major

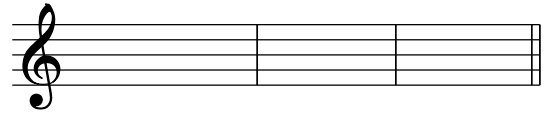

E minor

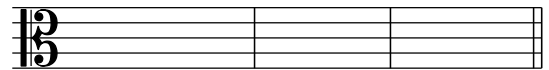

A minor

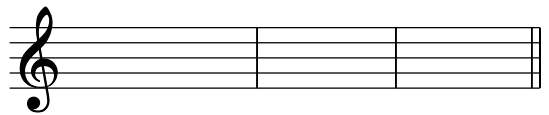

D minor

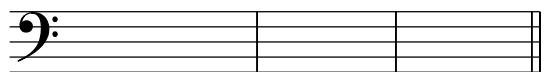

D major

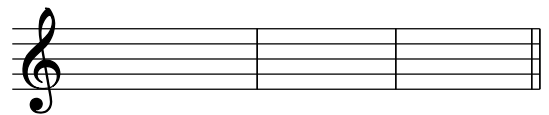

C major

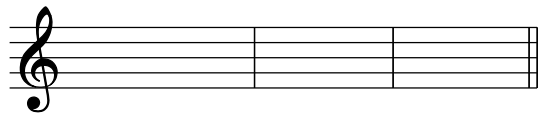

F# minor

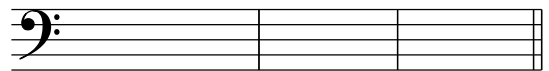

G minor

G major

F major

A major

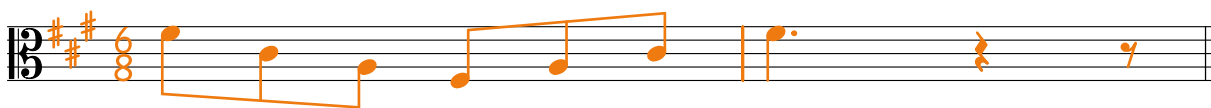

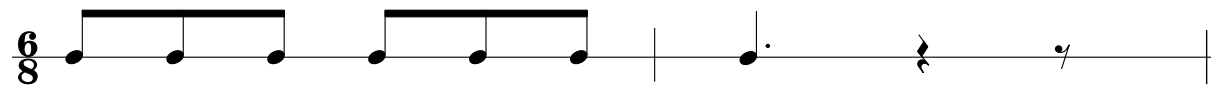

Handy tip!

You are asked to write both Roman numerals and chord symbols for practice; in reality composers use either one or the other (or neither).

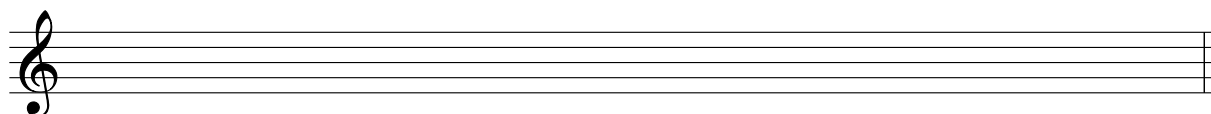

Arpeggios

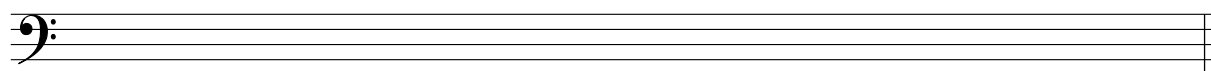

- 1** Write the key signature of each key shown. Then write its one-octave arpeggio in the rhythm given below.

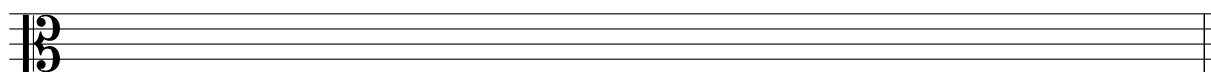

F sharp minor going down then up

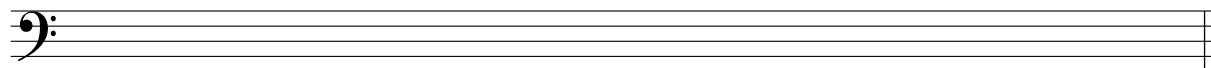

B minor going up then down

C minor going down then up

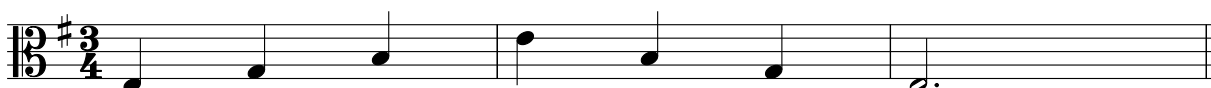

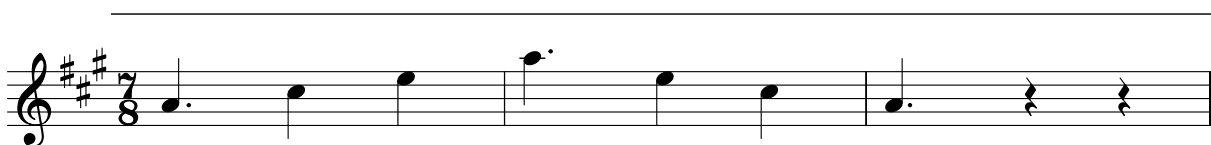

C major going up then down

A major going down then up

- 2** Label these one-octave arpeggios.

Broken chords

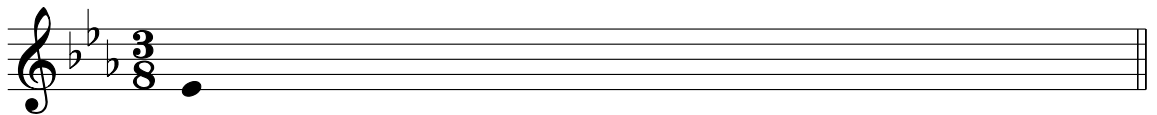

Remember

A broken chord, like an arpeggio, is made by 'breaking up' a chord. Sometimes you can find one-octave arpeggios within larger broken chord patterns.

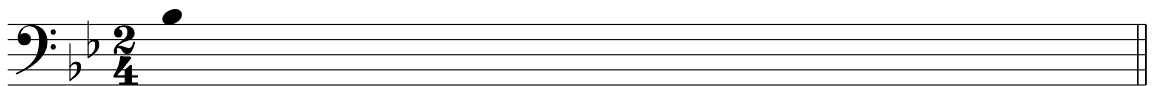

- Using minims, write a broken chord using F sharp minor tonic triad (going up). Use patterns of three notes each time. Finish on the first **F sharp** above the stave.

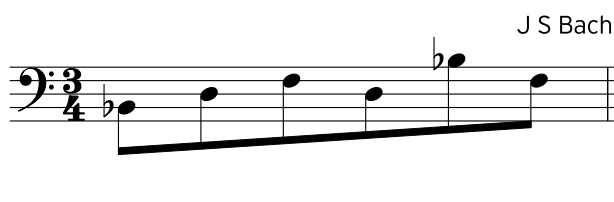

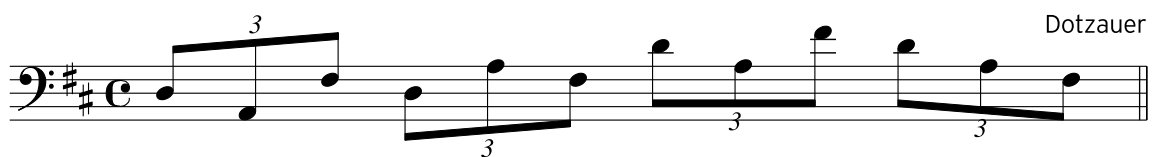

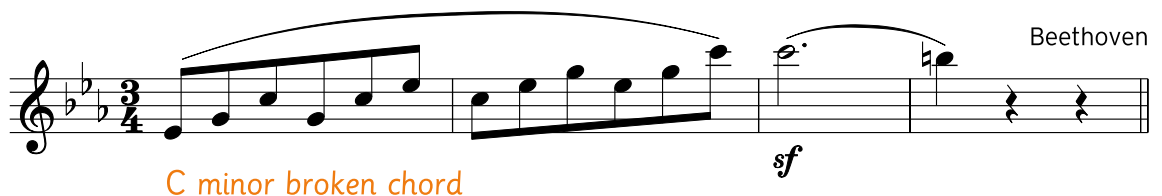

- Using quavers, write a broken chord using E flat major tonic triad (going up). Use patterns of three notes each time. Finish on the first **E flat** above the stave.

- Using triplet quavers, write a broken chord using B flat major tonic triad (going down). Use patterns of three notes each time. Finish on the first **B flat** below the stave.

- Label these broken chords.

Did you know?

Composers use broken chords to give the music a particular feel or texture. You can describe texture in many ways, for example, thick, thin, polyphonic (two or more separate parts interweaving), homophonic (parts moving in the same rhythm).

Working out the key of a piece

For Grade 4 you need to be able to recognise more major and minor keys (see page 20).

Here are two examples to remind you how to work out the key each time.

1

Mozart

- Are there flats or sharps in the key signature and, if so, how many? **Yes, three sharps, so the key could be A major or F sharp minor**
- Are there any accidentals in the music that could be the raised 6th or 7th degrees in the relative minor? **No**
- Are there any other reasons to think that the key is A major? **Yes, the first two bars are based on the scale of A major and the last part of the music is based around the notes of the tonic triad in A major**

Answer: **The key is A major**

2

Haydn

- Are there flats or sharps in the key signature and, if so, how many? **Yes, three flats, so the key could be E flat major or C minor**
- Are there any accidentals in the music, that could be the raised 6th or 7th degrees in the relative minor? **Yes (so the key is probably a minor)**
- Are there any other reasons to think that the key is C minor? **Yes, much of the music is based around the tonic triad of C minor and the last note is on the dominant (G)**

Answer: **The key is C minor**

Remember

The composer may be using the melodic minor scale (6th and 7th degrees raised going up and returned to natural minor pitch going down).

1 Use the questions above to work out the keys.

Schubert

etc.

Key: _____

Chopin

p

Key: _____

J S Bach

etc.

Key: _____

Schubert

pp

Key: _____

Paradies

Key: _____

Handel

Key: _____

Subdominant triads

Did you know?

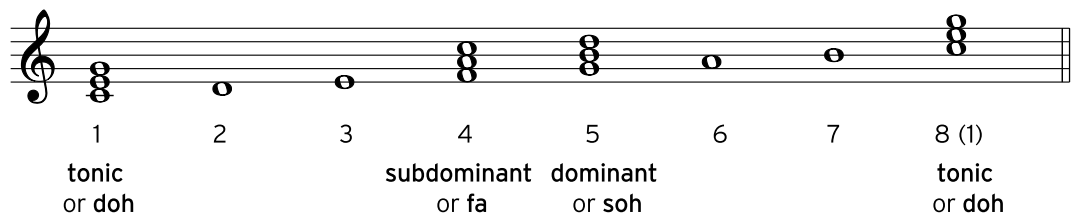

Chords I, IV and V are often known as **primary chords** because they are so important to the sound of the key. Many songs are composed using only these chords.

In major keys

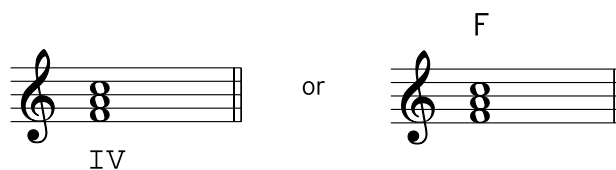

As you know, the 1st and 5th degrees of the scale are very important to the sound of any key. The triads built on the tonic and the dominant are often considered the most important chords in a key.

The 4th degree (the **subdominant**) – and the triad built on it – is also significant within a key. The subdominant of the scale can also be called **fa**.

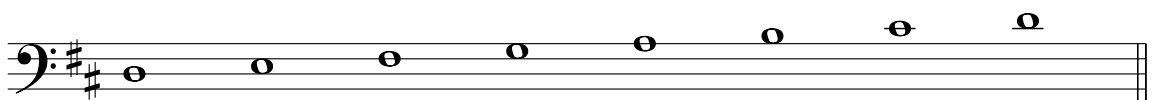

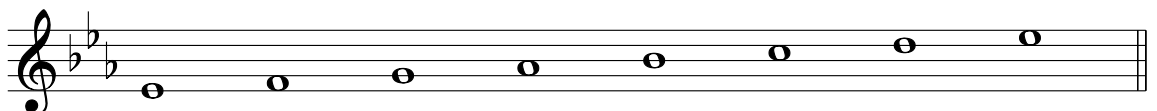

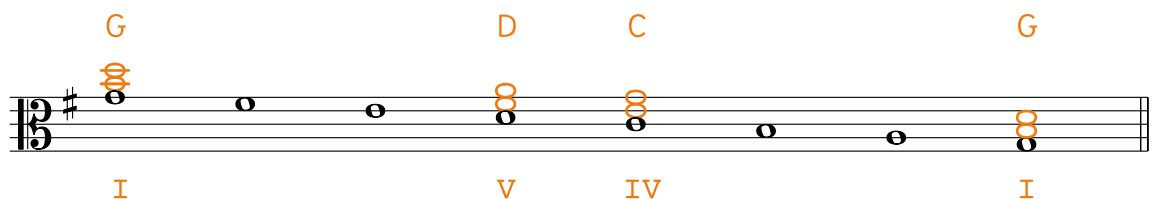

Here is the scale of C major with triads built on the 1st, 4th and 5th degrees:

Here is the subdominant triad in the key of C major. Notice that it is labelled IV or F because the bottom interval of the triad is a major 3rd:

- Here are some major scales. Write triads on the tonic, subdominant and dominant degrees of the scales and label them with Roman numerals below the staff and chord symbols above.

Did you know?

Chords i, iv (or IV) and v (or V) are also known as **primary chords** in minor keys.

In minor keys

Subdominant triads in minor keys are built on the subdominant of the minor scale.

Here is the harmonic minor scale of A minor with triads built on the 1st, 4th and 5th degrees:

1 2 3 4 5 6 7 8 (1)

tonic subdominant dominant tonic

Here is the subdominant triad in the key of A minor. Notice that it is labelled iv or Dm because the bottom interval in the triad is a minor 3rd:

Dm

iv

However, if a composer uses the melodic scale going up the **F** is raised because **F sharp** is the 6th degree of A melodic minor scale:

D

IV

- 1 Here are some minor scales. Write triads on the tonic, subdominant and dominant degrees of the scales and label them with Roman numerals below the staff and chord symbols above.

i v iv i

Gm D Cm Gm

Handy tip!

Check whether the scale is harmonic or melodic.

Chord progression

- 1 Label the triads with Roman numerals below the staff and chord symbols above to show the chord progression.

C F G C

I IV V I

(C major)

(F major)

(B minor)

(A major)

(F# minor)

(D major)

(G minor)

Remember

Chord progression means the order in which chords move from one to another in a piece of music.

Remember

The chords in these examples have been written in root position to make the chord progression easy to see. Composers hardly ever do this because it creates parallel 5ths (see page 33).

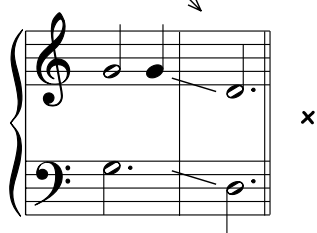

Writing a bass line

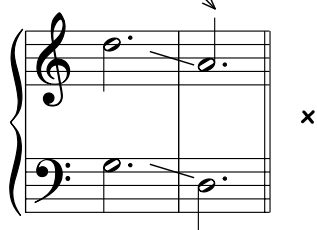

Remember

A strong bass line often moves in contrary motion to the tune. Do not let the bass line move in similar motion in perfect 5ths or octaves with the tune; this sounds weak and will lose you marks in your exam.

parallel octaves

parallel 5ths

These parallel 5ths are compound intervals. See page 54.

Handy tip!

Try to play the music that you write on a keyboard so that you learn to imagine the sounds you write down. This will be useful when it comes to your exam.

In major keys

1 Use the root of each triad shown by the Roman numerals to write a bass line.

2 Use the root of each triad shown by the chord symbols to write a bass line.

C F G C

E $\flat$ A $\flat$ B $\flat$ E $\flat$

In minor keys

1 Use the root of each triad shown by the Roman numerals to write a bass line.

i iv V i

i iv V i

i iv V i

2 Use the root of each triad shown by the chord symbols to write a bass line.

Em Am B Em

F#m F#m Bm C# F#m

Cm Fm G Cm

Writing a tune

In major keys

1 Use notes from the tonic, subdominant or dominant triads shown by the Roman numerals to write a tune above the bass line.

I IV V I

Remember

A strong tune often moves in contrary motion to the bass line. Do not let the tune move in similar motion in perfect 5ths or octaves with the bass line; this sounds weak and will lose you marks in your exam.

The first example is in G major (one sharp) and 3/8 time. The bass line consists of four quarter notes: G2, B2, D3, and G2. Below the staff are the Roman numerals I, IV, V, and I. The second example is in F major (one flat) and 4/4 time. The bass line consists of four half notes: F2, Bb2, D3, and F2. Below the staff are the Roman numerals I, IV, V, and I. The third example is in Bb major (two flats) and 2/4 time. The bass line consists of four quarter notes: Bb1, D2, F2, and Bb1. Below the staff are the Roman numerals I, IV, V, and I.

In minor keys

When you write a tune above the bass line in a minor key, notice whether the Roman numerals are large (I, IV, V) or small (i, iv, v). If they are large for the subdominant and dominant chords, the composer is using the melodic minor scale and the 6th and 7th degrees of the scale need to be raised like this (in A minor):

The example is in A minor (no sharps or flats) and 2/4 time. The bass line consists of four quarter notes: A1, D2, F2, and A1. Above the staff, the melody consists of four quarter notes: A2, C#3, E3, and A2. Below the staff are the Roman numerals i, IV, V, and i.

If the Roman numerals are small, the 6th and 7th degrees remain as for the natural minor scale (or the melodic minor scale going down).

The example is in A minor (no sharps or flats) and 2/4 time. The bass line consists of four quarter notes: A1, D2, F2, and A1. Above the staff, the melody consists of four quarter notes: A2, C3, E3, and A2. Below the staff are the Roman numerals i, v, iv, and i.

- 1 Use notes from the tonic, subdominant or dominant triads shown by the Roman numerals to write a tune above the bass line.

Remember

Try to play the music that you write on a keyboard so that you learn to imagine the sounds you write down. This will be useful when it comes to your exam.

i IV V i

i IV V i

i iv V i

i IV V i

i iv V i

- 2** Use notes from the tonic, subdominant or dominant triads shown by the chord symbols to write a tune above the bass line.

Em Am B Em

Bm E F# Bm

Dm Gm A Dm

Gm Cm D Gm

- 3** Look at the tunes you have written and add some musical words and symbols that you know. Also see page 55 for those for Grade 4.

Unaccented passing notes

Did you know?

Harmony notes are the notes that you use to write chords below the tune in a chord progression.

Tunes are most often composed using the notes of the chords that accompany them. **Unaccented passing notes** are notes that link the harmony notes in a tune to make it sound smoother to the listener. They do not appear in strong parts of the bar.

Here is an example in C major. The unaccented passing notes are circled so that they are easy to see:

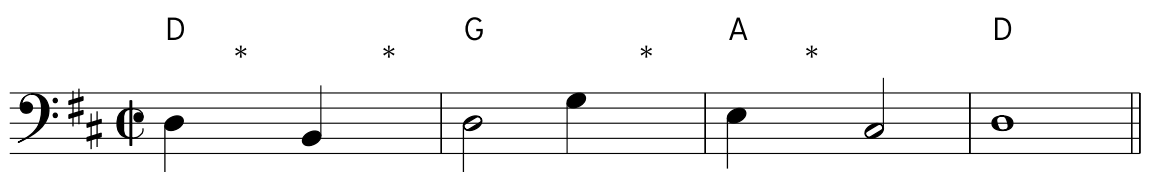

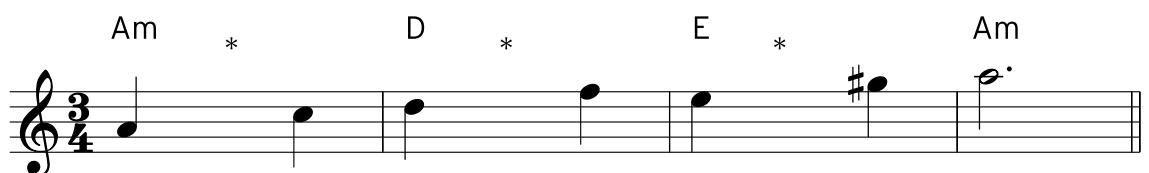

When writing unaccented passing notes in minor keys, notes from the melodic scale are often used to make the contour of the tune sound smooth. However, there are many cases where composers use notes from the harmonic or natural minor scales; it depends on whether the composer uses iv or IV, v or V.

Here is an example in the key of A minor where notes of the natural (or melodic) minor scale have been used going down:

- 1 Add some crotchet unaccented passing notes below the asterisks (*).

Did you know?

Melody is another word for tune; this word will sometimes be used in your exams.

- 2 Add some unaccented passing notes to the melodies you wrote on pages 35-38.

4-part chords

Remember

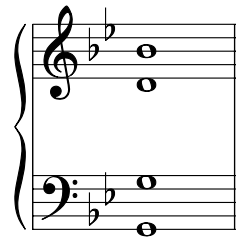

Spread the notes of the chord fairly evenly across the staves. This makes the chord sound clear and balanced and gives all the singers a note which suits their range. However, it is acceptable to have a distance greater than an octave between the bass and tenor parts. See page 69 for voice ranges.

For Grade 4 you need to know how to write tonic, subdominant and dominant chords for SATB (soprano, alto, tenor and bass voices) in the keys you know.

Work out which triad you need to use from the Roman numeral given. Then double the root and write out the chord, being careful not to position the notes too closely together, especially in the tenor and bass.

Here are some examples of the way these chords could be successfully written for SATB:

Tonic chord in the key of G minor:

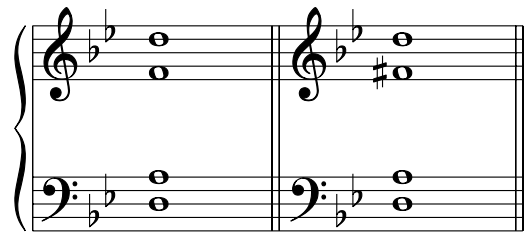

i

Subdominant chord in the key of G minor:

iv or IV

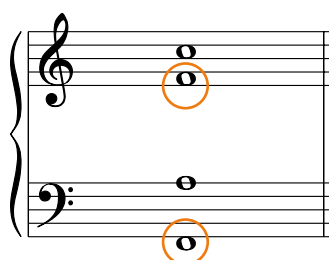

Dominant chord in the key of G minor:

v or V

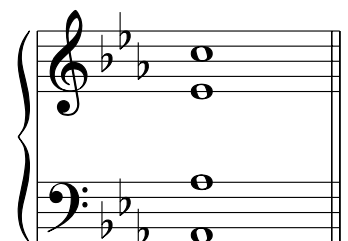

1 Circle the two roots in the following chords.

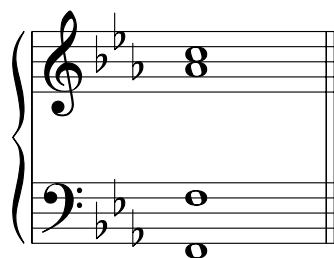

(C major) IV

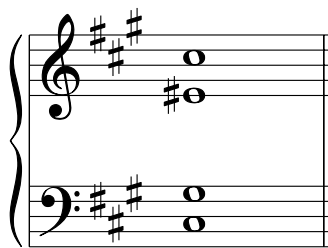

(B minor) V

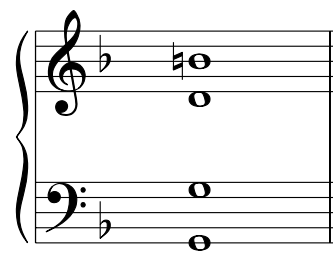

(Eb major) IV

(C minor) iv

(F# minor) V

(D minor) IV

2 Using crotchets, write out 4-part chords for SATB using the chords shown by the Roman numerals. Double the root in each case and make sure that each chord is in root position.

(B minor) iv

(C minor) IV

(A major) V

Handy tip!

Try to play the chords that you write on a keyboard so that you learn to imagine the sounds you write down. This will be useful when it comes to your exam.

(G minor) i

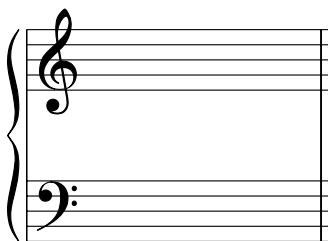

(Eb major) IV

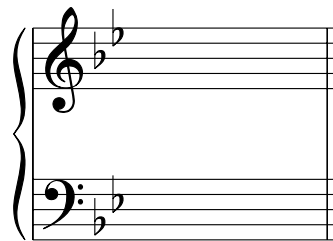

(F# minor) iv

(C major) V

(A minor) iv

(G minor) v

Plagal cadences

Handy tip!

Play these cadences (or ask your teacher if you need help).

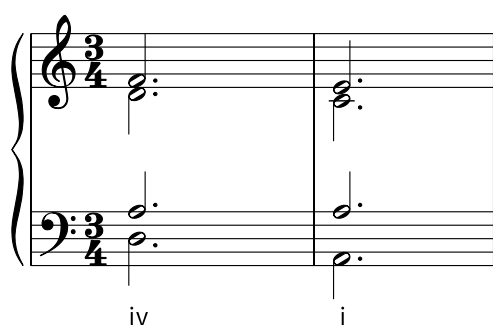

For Grade 3 you learned that cadences are chord progressions that behave like punctuation in sentences. They give structure and meaning to the music. You learned to recognise the perfect cadence (V-I or V-i), which acts as a musical full stop.

Sometimes composers use another kind of cadence called a **plagal cadence**, and you will need to recognise this chord progression for Grade 4. It is rarer than the perfect cadence – and is occasionally called the Amen cadence because it can be found a lot in church music. It sounds calmer than the perfect cadence.

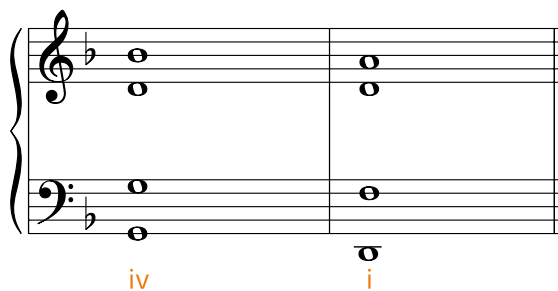

Here is a plagal cadence in C major:

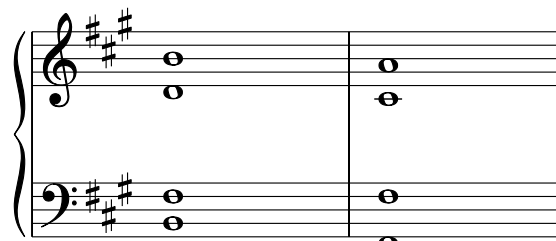

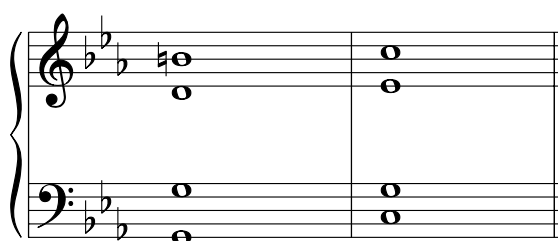

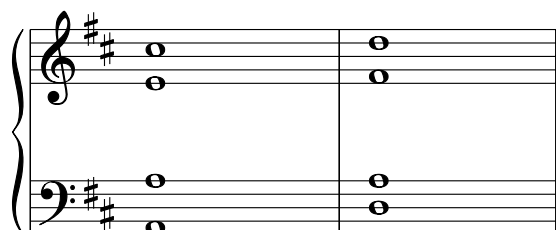

Here is a plagal cadence in A minor:

- 1 Look at these cadences. Give the key of each cadence and say whether it is perfect or plagal. Write in the chords in Roman numerals.

Plagal cadence in D minor

Intervals – augmented 4ths and diminished 5ths

Did you know?

Augment in this context means to make the interval larger.

Diminish in this context means to make the interval smaller.

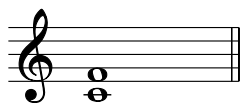

Handy tip!

First, count up from the bottom note to get the interval number. Then imagine that the bottom note is the tonic in the major key. If the top note is in its major scale the interval will be a perfect 4th or 5th. If not, check whether it is one semitone larger or smaller.

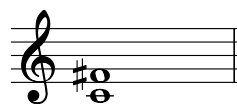

For Grade 4 you need to know the difference between perfect and augmented 4ths and perfect and diminished 5ths.

Augmented 4ths

Interval: Perfect 4th

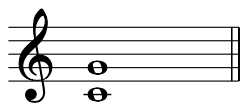

In major and minor keys there is always an interval of a **perfect 4th** between the 1st and 4th degrees of the scale.

Interval: Augmented 4th

An **augmented 4th** is one semitone larger than a perfect 4th.

Diminished 5ths

Interval: Perfect 5th

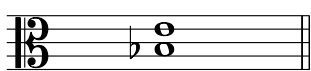

In major and minor keys there is always an interval of a **perfect 5th** between the 1st and 5th degrees of the scale.

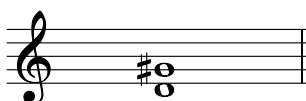

Interval: Diminished 5th

A **diminished 5th** is one semitone smaller than a perfect 5th.

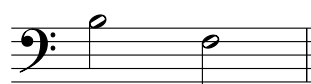

1 Name the following intervals.

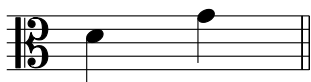

Interval: Augmented 4th

Interval: _____

Interval: _____

Interval: _____

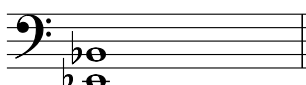

Interval: _____

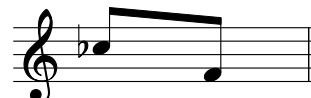

Interval: _____

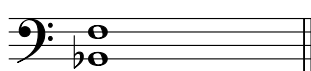

Interval: _____

Interval: _____

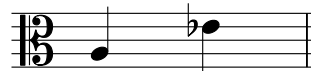

Interval: _____

Interval: _____

Interval: _____

Interval: _____

Did you know?

Augmented 4th

Diminished 5th

If you play these intervals on a piano keyboard, they sound exactly the same. This is because F sharp and G flat are enharmonically equivalent (see page 16).

This is why it is important to count up from the bottom note to get the interval number correct.

Did you know?

Augmented 4ths and diminished 5ths split an octave exactly in half and come halfway along a chromatic scale. Augmented 4ths are also sometimes known as tritones.

2 Circle the augmented 4ths.

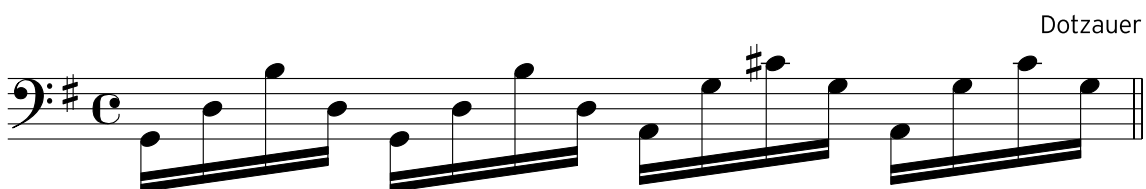

Haydn

etc.

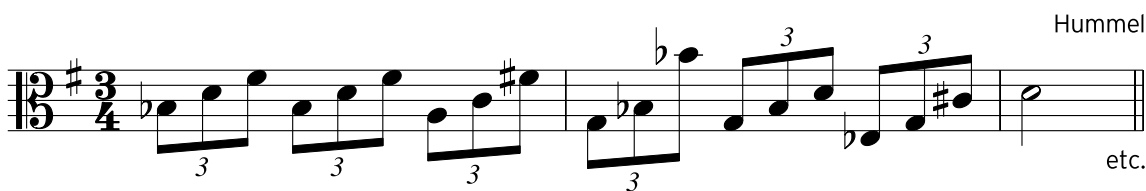

Schubert

etc.

Dotzauer

Hummel

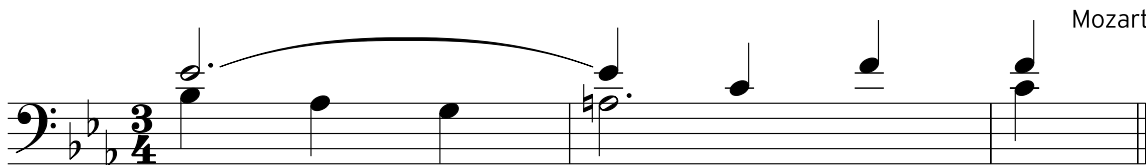

etc.

3 Is the distance between a perfect 4th larger or smaller than an augmented 4th?

4 Circle the diminished 5ths.

etc.

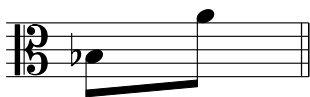

Beethoven

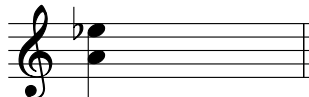

Yandell

5 Is the distance between a perfect 5th larger or smaller than a diminished 5th?

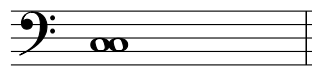

1 Name the following Grade 4 intervals.

Interval: Major 7th

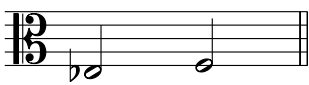

Interval: _____

Interval: _____

Interval: _____

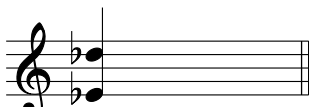

Interval: _____

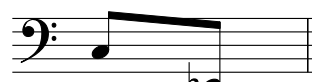

Interval: _____

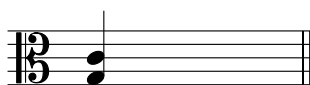

Interval: _____

Interval: _____

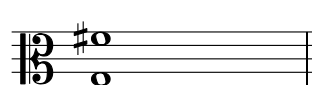

Interval: _____

Interval: _____

Interval: _____

Interval: _____

Transposing tunes up or down a perfect 4th or 5th

If a piece of music is written too high or low for an instrument to play – or for a voice to sing – it is sometimes necessary to move it to a more comfortable register. Look at this:

This is easy for a soprano to sing but not suitable for an alto. Transposing it down a perfect 5th makes it comfortable for an alto to sing:

Use the following method:

- Write the tonic of the piece and its key signature
- Move the tonic up or down a perfect 4th or 5th to find the new tonic
- Write the new tonic and its key signature
- Write out the tune up or down a perfect 4th or 5th with the same intervals between the notes
- Check that the last note you write is a perfect 4th or 5th higher (or lower) than the original last note

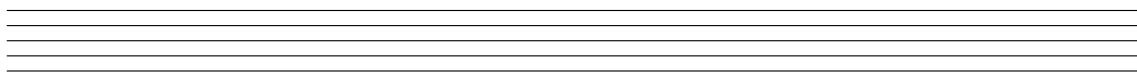

1 Transpose the following tunes down a perfect 4th.

Remember

Use a key signature and add accidentals where necessary to keep the intervals a perfect 4th or 5th apart.

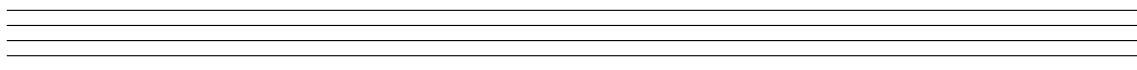

Mozart

Beethoven

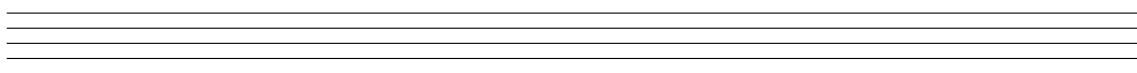

etc.

2 Transpose the following tunes up a perfect 4th.

Haydn

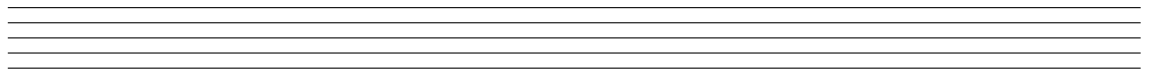

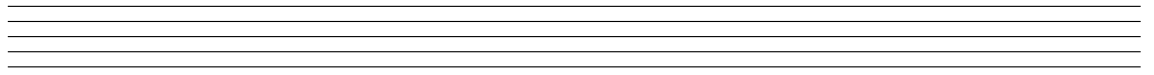

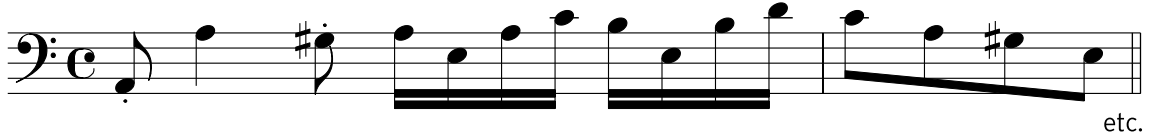

Brahms

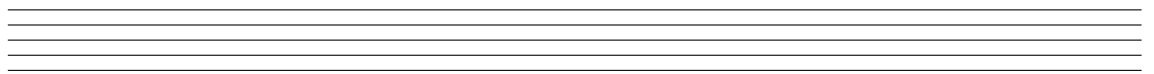

Some instruments play music that sounds at a higher or lower pitch than the music they play. They are called **transposing instruments**.

J S Bach

Yandell

Did you know?

Music for double bass is written an octave higher than it sounds.

Music for descant recorder is written an octave lower than it sounds.

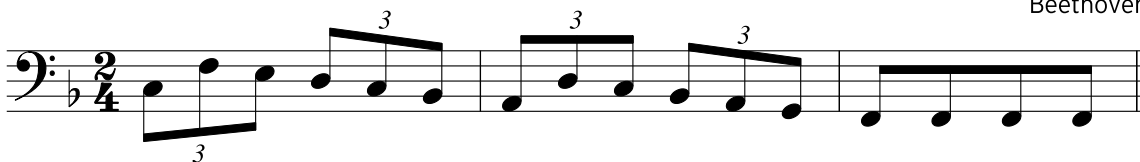

Music for classical (or Spanish) guitar is written an octave higher than it sounds.

Music for French horn in F is written a perfect 5th higher than it sounds.

See page 68 for the ranges of these instruments.

- 5** Transpose this tune up an octave so that a double bass player will be able to play it at the same pitch as the following notes.

Beethoven

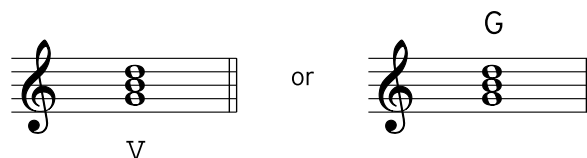

The dominant 7th chord

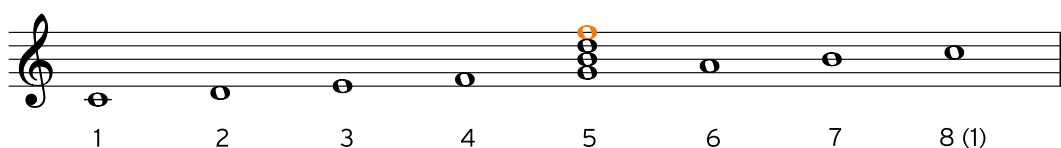

In major keys

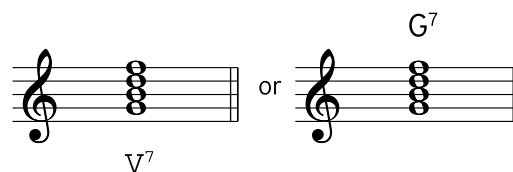

As you know, the dominant triad is built on the dominant degree of the scale. To remind you, here is the dominant triad in C major:

For the **dominant 7th chord**, a 7th above the root of the dominant triad is added. Here is the scale of C major showing how this works:

Here is the dominant 7th chord in C major. Notice that the little ⁷ is put just after the Roman numeral and the chord symbol.

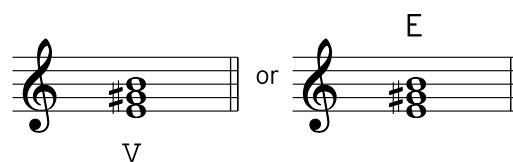

Handy tip!

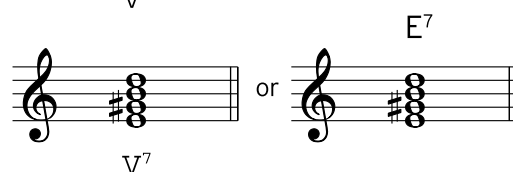

Play these examples on the keyboard to get a feel for V^7-I and V^7-i .

In minor keys

Here is the dominant triad in A minor:

Here is the dominant 7th chord in A minor:

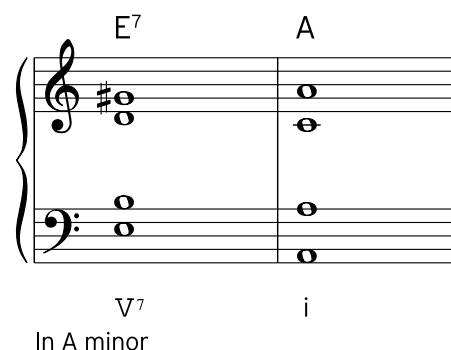

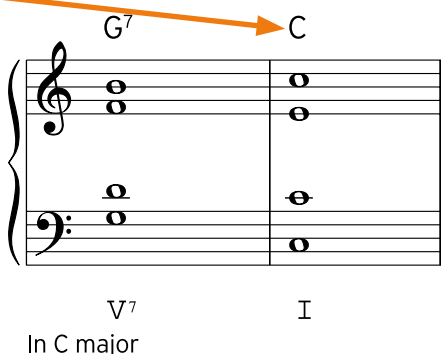

Did you know?

In the tonic chords here the composer has chosen to leave out the 5th of the chord. Composers sometimes do this, but they hardly ever leave out the 3rd or root, because this would take away the true character of the chord.

The fascinating thing about the dominant 7th chord is that it feels as though it is magnetically attracted to its tonic chord and isn't happy until it 'resolves' there.

As you know, the dominant chord followed by the tonic ($V-I$ or $V-i$) makes a perfect cadence. Sometimes composers use V^7-I or V^7-i instead. These are still called perfect cadences. Here are two examples:

- 1 Here are some major and minor scales. Write a triad on the tonic and a dominant 7th chord on the dominant of the scale and label them with Roman numerals below the stave, and chord symbols above.

Example 1: E-flat major scale (E-flat, F, G, A, B-flat, C, D, E-flat)

Chord symbols above the stave: $E\flat$, $B\flat^7$, $E\flat$

Roman numerals below the stave: I, V^7 , I

Example 2: E-flat minor scale (E-flat, F, G, A, B-flat, C, D, E-flat)

Example 3: E-flat major scale (E-flat, F, G, A, B-flat, C, D, E-flat)

Example 4: E-flat minor scale (E-flat, F, G, A, B-flat, C, D, E-flat)

- 2 Label the triads and dominant 7th chords with Roman numerals below the stave and chord symbols above to show the chord progression.

Remember

The chords in these examples have been written in root position to make the chord progression easy to see. Composers hardly ever do this because it creates parallel 5ths (see page 33).

Example 1: F# minor scale (F#, G#, A, B, C#, D, E, F#)

Chord symbols above the stave: $F\#m$, B, $C\#$, $C\#^7$, $F\#m$

Roman numerals below the stave: i, IV, V, V^7 , i

(F# minor)

Example 2: G major scale (G, A, B, C, D, E, F#, G)

Example 3: A minor scale (A, B, C, D, E, F, G, A)

Example 4: D major scale (D, E, F#, G, A, B, C#, D)

More about writing a bass line

In major and minor keys

1 Use the root of each chord shown by the Roman numerals to write a bass line.

Did you know?

The circled notes are unaccented passing notes (see page 39). Notice that they make the tunes smoother.

i iv V V⁷ i

i V⁷ V⁷ i

I IV V⁷ I

2 Use the root of each chord shown by the chord symbols to write a bass line. Then circle the unaccented passing notes in the tune.

Em B B⁷ Em

D G A⁷ D

Cm G G⁷ Cm

More about writing a tune

In major and minor keys

- 1 Use notes from the chords shown by the Roman numerals to write a tune above the bass line. Add some unaccented passing notes.

Remember

Unaccented passing notes are notes that link the harmony notes in a tune to make it sound smoother to the listener. They appear on the weaker beats of the bar.

i iv V V⁷ i

I V⁷ V⁷ I

i iv V⁷ i

2 Use notes from the chords shown by the chord symbols to write a tune above the bass line. Add some unaccented passing notes.

B^b F F⁷ B^b

Em Am B⁷ Em

3 Look at the tunes you have written and add some musical words and symbols that you know. Also see page 55 for those for Grade 4.

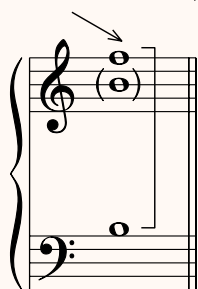

More about the dominant 7th chord

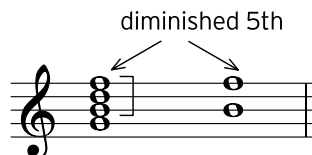

Did you know?

Intervals larger than an octave are called **compound intervals**. An octave plus a diminished 5th can be called a compound diminished 5th. You can also count the number from the bottom to the top and call it a diminished 12th.

compound diminished 5th (or diminished 12th)

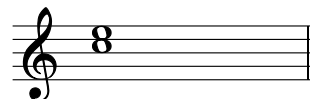

There is an interval of a diminished 5th within every dominant 7th chord in root position. This interval gives the chord an insecure feel.

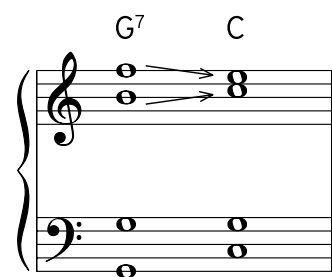

In C major

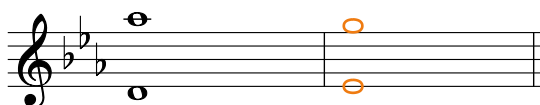

This wants to resolve to:

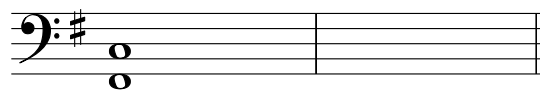

To resolve the dominant 7th to the tonic chord as smoothly as possible, the leading note (in this case **B**), usually rises in the same part to the tonic (**C**). The seventh in the dominant 7th chord (**F**) falls in the same part to the 3rd of the tonic chord (**E**).

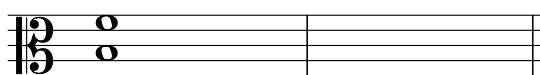

1 Resolve these diminished 5ths. Some of them are written as compound diminished 5ths.

(E♭ major)

(G major)

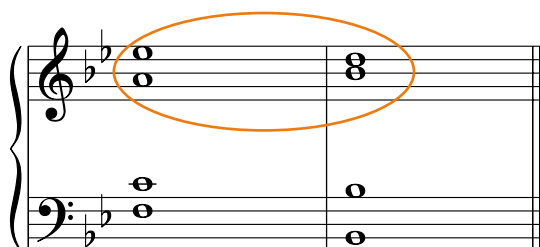

(C major)

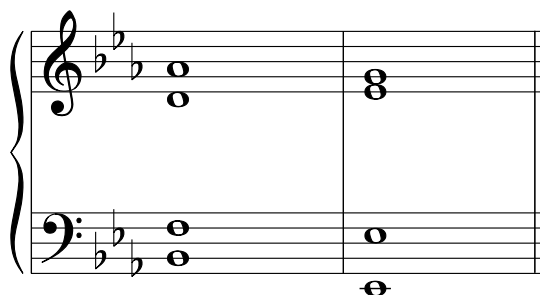

(E minor)

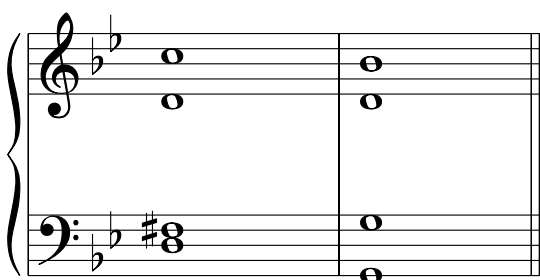

2 Circle the intervals of a diminished 5th (or compound diminished 5th) and their resolutions.

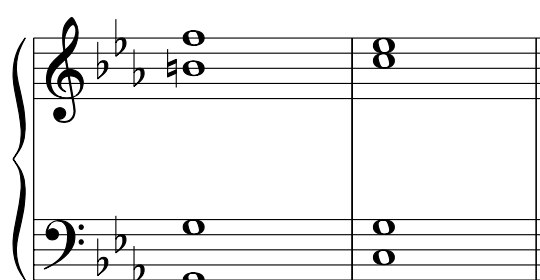

(B♭ major)

(E♭ major)

(G minor)

(C minor)

Musical words and symbols

Form

Music is a series of sounds within a time-span. Composers help listeners make sense of their music by sorting their ideas into contrasting sections – each with a number of phrases. When musicians talk about these sections and the way they are put together, they talk about the **form** of a piece.

For Grade 4 you need to be able to say how many sections there are in a piece. These sections are often shown by repeat marks (usually just after a perfect cadence) or in vocal music by the labels **verse** and **chorus** or **refrain**. Composers make use of repetition in their pieces so that listeners can feel familiar with what they hear. Try to hear in your head the music you see, so that you can feel where the sections end.

For Grade 4 you need to know the following, in addition to the words and symbols for Grades 1-3.

Articulation marks

fp (*fortepiano*) – play loudly, then immediately let the sound die away

sf or *sfz* (*sforzando*) – play the music with a heavy accent

Expression marks

animato – play in an animated way

brio – brilliantly

giocoso – playfully

largo – slow and broad

maestoso – majestically

pesante – heavily

Tempo marks and other signs

accelerando – speed up

assai – very

ben – well (*ben marcato* – well accented)

con moto – with movement (e.g. quite fast)

l'istesso – the same

primo – the first (*tempo primo* – at the first speed of the piece)

sempre – always

senza – without

simile (*sim.*) – play in a similar way

subito – suddenly

troppo – too much (*ma non troppo*) – but not too much

p *mf*

f

p *f*

1. In how many sections is this piece? Two, each repeated
2. In which key is this piece? C minor
3. How many times is the raised leading note to be played (treble part)?
It is to played four times (not including repeats)
4. What is the difference between the harmonic rhythm in bars 5-7 and bars 9-12?
The harmonic rhythm in bars 5-7 is static; the harmonic rhythm in bars 9-12 changes regularly every bar
5. Write an appropriate chord symbol above the second crotchet in bar 3.
6. Which 4-bar phrase in this piece ends on the dominant chord?
The first
7. Why do you think the composer has repeated the second 4-bar phrase of the piece at the end?
It is a way of making sure that listeners finish the piece feeling that they know it well
8. Is the sequence in bars 5-6 real or tonal (treble part)?
It is tonal
9. In which bars are there examples of syncopation (treble part)? Bars 9 and 11
10. Name the notes that are unaccented passing notes in bars 1 and 2 (treble part).
The two Ds in bar 1 and the two Fs in bar 2
11. Name the interval between the two notes marked with asterisks (*) in bar 11. Minor 7th
12. What does the little line above the last note mean (treble part)?
It means 'tenuto' — slightly lengthen and sustain the note
13. Comment on the spacing of the notes of the chords in this piece (bass part).
The spacing is close together which will make the chords sound rather heavy
14. Name a woodwind instrument that could play the treble part of this piece. A flute
15. Use Roman numerals to write the chord progression of the two last chords of this piece. V⁷ - i

Waltz

Schubert

1 **Moderato**

p

5

10

mf

14

The musical score is for a waltz by Franz Schubert. It is written in A major (three sharps) and 3/4 time. The tempo is marked 'Moderato'. The score is in piano (p) and mezzo-forte (mf) dynamics. It features a treble and bass staff. The piece begins with a piano introduction. The main melody is in the treble staff, and the bass staff provides harmonic support with chords. The score includes a first and second ending at measures 8-9. The piece ends at measure 14.

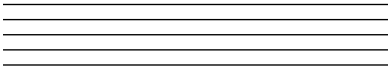

1. In how many sections is this piece? _____
2. In which key is this piece? _____
3. Circle a place where there are four notes of a chromatic scale put one after another.
4. Name two unaccented passing notes in bar 5. _____
5. Is the harmonic rhythm in bars 10-11 the same or different from that used in bars 12-13?

6. Name one bar in the piece where the harmonic rhythm changes on the 3rd beat of the bar.

7. Describe the dynamic markings in this piece.

8. Write an appropriate Roman numeral below the last crotchet beat of bar 16.
9. Write an appropriate chord symbol above the first crotchet beat of bar 17.
10. Name one bar where the treble and bass parts move in similar motion for the first two beats of the bar.

11. Name one bar where the treble and bass parts move in contrary motion for the first two beats of the bar.

12. Name the interval between the two notes marked with asterisks (*) in bar 6. _____
13. Write the first note of the treble part of this piece in alto clef.

14. Comment on the spacing of the notes of the chords in bar 5 and 6 (bass part).

15. Name a woodwind instrument that could play the treble part of the first section of the piece.

1. Name the two sections of this song. _____
2. In which key is this song? _____
3. Name two bars where phrases finish on the tonic chord. _____
4. Name two bars where phrases finish on the dominant chord. _____
5. Name two bars where phrases start on an anacrusis. _____
6. Is the harmonic rhythm in bar 1 the same or different from that used in bar 2?

7. Write an appropriate Roman numeral below the last dotted crotchet beat of bar 15.
8. Write an appropriate chord symbol above the first dotted crotchet beat of bar 16.
9. Name the cadence that finishes this song. _____
10. Comment on bars 5-8 and 13-16 (voice part).

11. Which type of voice (SATB) is most suited to singing this song?

12. Name the notes that are unaccented passing notes in bar 5 (voice part).

13. Name the interval between the two notes marked with asterisks (*) in bar 14 (bass part). _____
14. Why is there a line after the word 'below' in bar 4 (voice part)?

15. Compare the spacing of the notes of the chords in bar 1 with that used in bar 2 (treble part).

Sample examination paper

Section 1 (10 marks)

Put a tick (✓) in the box next to the correct answer.

Example

Name this note:

A ☐ D ☐ C ☒

This shows that you think C is the correct answer.

1.1 Name the circled note:

E ☐ F ☐ G ☐

1.2 Add the total number of quaver beats of silence in these rests.

12 ☐ 11 ☐ 10 ☐

1.3 Which is the correct time signature?

$\frac{6}{8}$ ☐ $\frac{5}{8}$ ☐ $\frac{7}{8}$ ☐

1.4 **Giocoso** means: playfully ☐ always ☐ not too much ☐

1.5 Which note is the enharmonic equivalent of this note?

F ☐ G ☐ G $\flat$ ☐

Boxes for
examiner's
use only

☐☐☐☐☐

1.6 Which note is the tonic of the minor key shown by this key signature?

E $\flat$ ☐ B $\flat$ ☐ C ☐

1.7 Here is the scale of F sharp natural minor. Which degree(s) of the scale will you change to make the scale of F sharp harmonic minor?

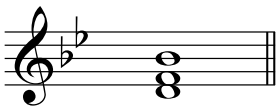

6th & 7th degrees ☐ 4th & 5th degrees ☐ 7th degree ☐

1.8 Which chord symbol fits above this subdominant triad?

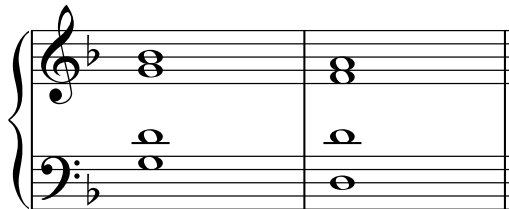

Gm ☐ G ☐ Dm ☐

1.9 Which Roman numeral fits below this triad?

I ☐ I $\flat$ ☐ I $\flat$ c ☐

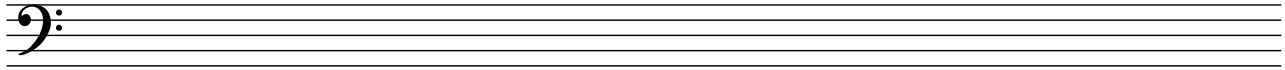

1.10 Name this cadence:

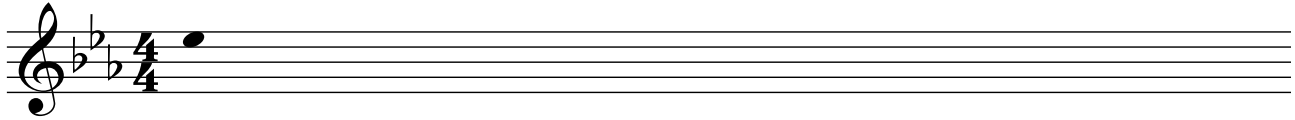

Plagal cadence in D minor ☐
Full close in D minor ☐
Perfect cadence in F major ☐

Section 2 (15 marks)

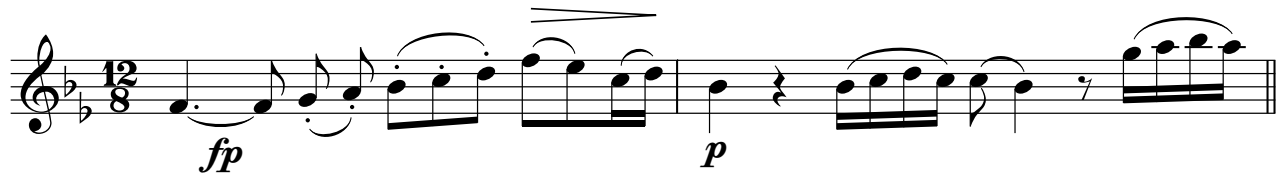

- 2.1 Write a one-octave C harmonic minor scale in crotchets going down then up. Do not use a key signature but write in the necessary accidentals.

☐

- 2.2 Using triplet quavers, write a broken chord using E♭ major tonic triad (going down). Use patterns of three notes each time. Finish on the first G below the stave.

☐
Section 3 (10 marks)

- 3.1 Circle five different mistakes in the following music, then write it out correctly.

☐
Section 4 (15 marks)

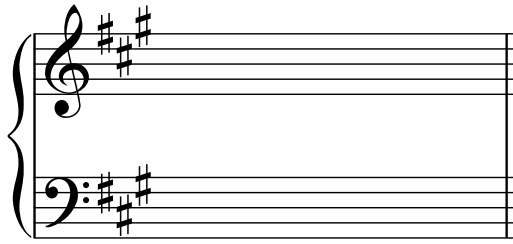

- 4.1 Transpose this tune up a perfect 5th so that a French Horn in F will be able to play it at the same pitch as the following notes. Use a key signature.

Mahler

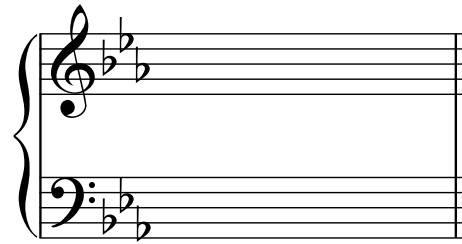

☐

Section 5 (15 marks)

- 5.1 Using crotchets, write out 4-part chords for SATB using the chords shown by the Roman numerals. Double the root in each case and make sure that each chord is in root position.

(F# minor)

V

(Eb major)

IV**Section 6** (15 marks)

- 6.1 Use notes from the chords shown by the chord symbols to write a tune above the bass line. Add some unaccented passing notes.

Em Am B⁷ Em

A musical staff with a treble clef and a key signature of one sharp (F#). The time signature is 4/4. The staff is divided into four measures. The bass line is provided in the lower staff, with notes: E (quarter), A (quarter), B (quarter), and E (quarter). The upper staff is empty, intended for writing a tune using notes from the chords Em, Am, B7, and Em, with unaccented passing notes.*Please turn over for Section 7*

Section 7 (20 marks)

Look at the following song and answer the questions opposite.

VERSE Traditional

he won the heart of a la - dy.

7.1 In how many sections is this song? _____

7.2 In which key is this song? _____

7.3 Look at bars 1-2 (treble part) and bars 1-2 (voice part). Comment on the pitch. _____

7.4 In which bars is the melody syncopated (voice part)? _____

7.5 Write an appropriate chord symbol above the third crotchet beat of bar 4. _____

7.6 Describe the harmonic rhythm in bars 10 and 11. _____

7.7 Write appropriate Roman numerals below the last crotchet beat of bar 17 and the last chord of the song. _____

7.8 Name the cadence that finishes this song. _____

7.9 Circle every interval of a perfect 4th in this melody in bars 1-8 (voice part). _____

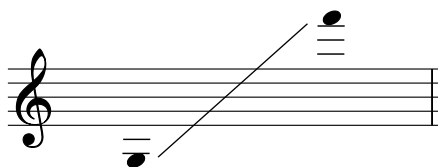

7.10 On which degree of the scale/key does the melody finish (voice part)? _____

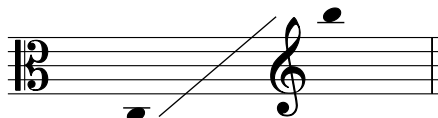

Instrument ranges

The ranges given here are the written ranges for players of approximately Grade 5 standard. The complete ranges (especially for string instruments) go much higher.

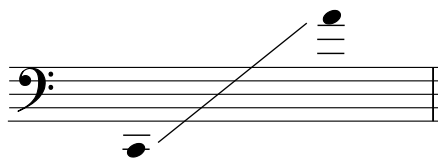

String instruments

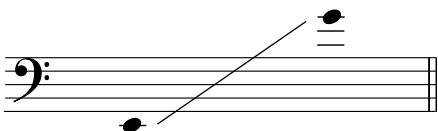

Violin

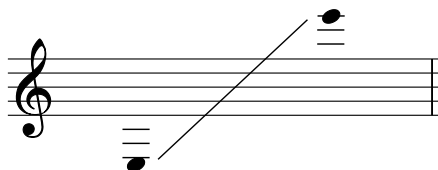

Viola

Cello

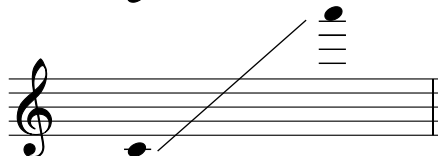

Double bass

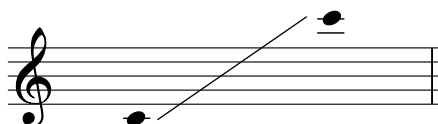

Classical guitar

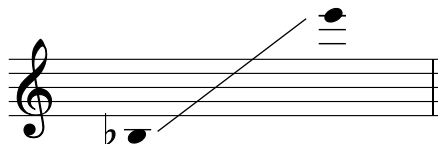

Woodwind instruments

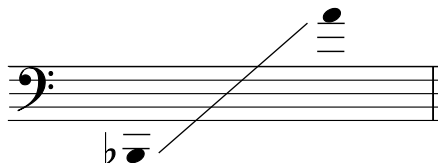

Flute

Descant recorder

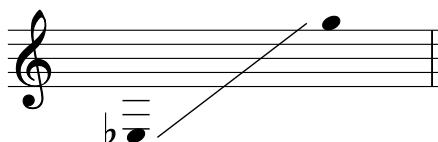

Oboe

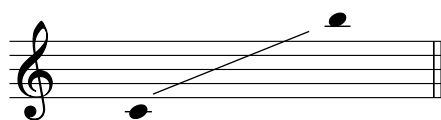

Bassoon

Brass instruments

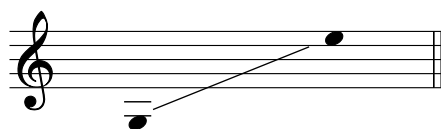

French horn in F

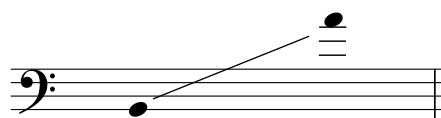

Voice ranges

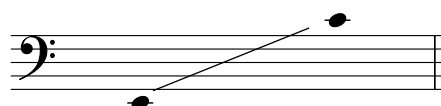

Soprano

Alto

Tenor *

Bass

* Sometimes music for tenor voice is written in treble clef an octave higher than it sounds, as you will learn in a later grade.

Remember

You may use American names for note values in your exam, but there is no need to use them at all if you do not want to.

Different words – same meaning

In music there are often different words to describe the same thing. You need to know the words that are in heavy type for Grade 4.

alto clef – C clef

C⁷ (in relation to chord symbols) – Cdom⁷

chord progression – harmony

parallel (e.g. 5ths/octaves) – consecutive

plagal cadence – Amen cadence, Church cadence, half close

strong beat – stress, down-beat

subdominant – fa

tune – melody

Middle C
